Hi. I'll be asking a question re: the MAAT contained in this report commissioned by GNWT (subsequently published).

If possible, can you ask the project's consultant and GNWT's climate folks to have a look? The question relates to the MAAT proposed by the project versus that projected in this report - the project's 6.1 degrees versus the 8.4 degree rate of warming observed. If GNWT issued a response to this I would be happy to know more - if there are concerns with this report's conclusions it would be useful to get them out early.

Shannon, can you add this to the registry if you think it's valuable.

Cheers,
