Shannon,

Here is my response to the commitments as discussed at the technical session:

Commitment 2: A map with SNP stations will be provided by the end of the day today to EC and the MVLWB;

Commitment 5: No further samples were taken from SNP 0053-2 other than what has already been reported.

This should conclude the list of requirements. Please let me know if you need anything further.

Thank you,

Michael

Hi Anne,

I did not get much of a response from the Town of Hay River on the Technical Session Commitments. According to the letter I sent:

- Commitment 1 was related to as-built drawing which will not be available until after the Town completes the desk-top planning study this summer;
- Commitment 2 referred to a map of all SNP stations which I have received no update on from the Town;
- Commitments 3 and 4 were to provide information on the amount of sewage pumped from lift stations and sent to GSL in 2008. See attached e-mail correspondence with Mary Kelly; and
- Commitment 5 was to confirm the frequency of sampling all parameters at SNP station 0053-2. Again, I have not heard back from the Town on this matter.

Thanks,
Shannon

Hi Shannon,
I just noticed that the Nov. 18th letter regarding Hay River's commitments has Mike Fournier on the distribution list. Please replace his name with our generic environmental assessment email address as shown above (ec.ea.nwt@ec.gc.ca). For ongoing file correspondence it is also helpful to include the file lead on the cc list, but the EA address will find us. For Hay River, could you add my email please.

Also, I didn't see the Town's response (due last Monday) on the registry - could you forward that to me asap please? I'm working remotely and need to get internal review and approval of our intervention to the manager today so we can submit on time!

Thanks,
Anne
