RE: Notification of Project Manager, contact info and general logistics for DDM's HW Camp

Clint;

Please accept this as notification that as of July 31st, 2018, a crew of 5 people will be mobilizing to the HW camp via twin otter to the esker landing strip at HW. This number includes a helicopter pilot and machine from Acasta Heliflight. This will initiate a 3-4 week program of ground truthing, RC drilling for till samples, an airborne LiDAR survey and Palmer Environmental completing a till suitability survey. We expect this program to run from July 31-August 28, 2018. The program may end sooner but we will notify you of the end date.

The Project manager onsite is David Cox of Aurora Geosciences Ltd. His contact info at site is via internet phone (778-223-4866) or by email : david.cox@aurorageosciences.com. The intown person for contact will be myself and I can be reached at 867-445-2461 and email is gary.vivian@aurorageosciences.com. I will be in the field for the first 4 days of this program.

I hope to have you the digitized proposed holes for RC drilling by the end of the day. Obviously, these will change minimally as frost boils are very important in this type of surveying so holes may change by 10's of meters.

Please do not hesitate to contact me should you have any concerns.

Respectfully submitted,

Gary Vivian, M.Sc., P.Geol.
Chairman
