Subject: Giant Mine AQM weekly summary report for the week ending January 10, 2015
Attachments: AQM Weekly Summary Jan 4-10, 2015.pdf

Greetings,

Attached is the AQM weekly summary report for Giant Mine for week ending January 10, 2015.

In discussions with the Giant Mine Working Group, in lieu of the detailed weekly reports the project has decided to provide weekly summaries and a detailed monthly report. This is done to make the reporting more useful to users, while still maintaining the level of details previously provided.

A summary of the report is provided below:

Fenceline network:

- Air quality monitoring along the fenceline resumed on January 5, 2015, coinciding with the continuation of the Interim Underground Stabilization (IUS) program (tailings work);
- No 15-minute average particulate matter less than 10 microns in diameter (PM₁₀) concentrations above the established Risk Based Action Level (RBAL) criteria were measured at the fenceline locations during the week. PM₁₀ concentrations measured at the fenceline locations remained typical of background concentrations;
- No 15-minute average total suspended particulate (TSP) concentrations above the established RBAL were measured at the fenceline locations during the week;

Community Stations

- There were no continuous 24-hour average concentrations of particulate matter less than 2.5 microns in diameter (PM_{2.5}) and no continuous 24-hour average PM₁₀ concentrations above the referenced criteria measured at the community stations during the week;
- Laboratory results from TSP, PM₁₀, and trace metals (including arsenic) samples measured on December 13 and 16, 2014 at the community stations were less than the analytical detection limit and/or below the referenced criteria. Laboratory results from samples collected at the community stations after December 16, 2014 are pending;
- There were no additional analytical results received for asbestos. Laboratory results from asbestos samples collected at the community stations after December 10, 2014 are pending;

Interim Underground Stabilization (IUS) (tailings work)

- Air quality monitoring near the IUS work resumed on January 5, 2015 in support of remaining IUS activities (tailings work);

- There were no 15-minute average PM₁₀ concentrations above the established IUS tailings pond remediation RBAL (180 µg/m³) measured in the vicinity of the tailings ponds during the week;
- Analytical 24-hour arsenic results measured at six locations near IUS work activities around the North and Central Tailings Ponds on December 13, 16, and 19, 2014 were less than the analytical detection limit and/or below the referenced criteria. Analysis of filter results collected after December 19, 2014 is pending.

General Operations

- The AQM program operated as specified during the week ending January 3, 2015 with the exception of:
 1. Data from the PM_{2.5} and PM₁₀ BAM monitors at the NAPS station were not available at the time of this report.

YELLOWKNIFE, NT X1A 2P6

Dear: Mr. Hagen,

RE: Water Licence MV2012L8-0010 – Air Quality Reports for the Week of January 4

This report is meant to satisfy commitments made in the May 21, 2013, responses to review comments on the roaster plans. Our commitment was to provide weekly summaries of the following data:

- PM₁₀ measurements captured by the contractor and the fence-line program;
- All other available and quality assured data, including TSP, trace elements (metals) and asbestos data.

In discussions with the Giant Mine Working Group, in lieu of the detailed weekly reports the project has decided to provide weekly summaries and a detailed monthly report. This is done to make the reporting more useful to users, while still maintaining the level of details previously provided.

In summary for the week of January 4 – January 10, 2015:

Fenceline network:

- Air quality monitoring along the fenceline resumed on January 5, 2015, coinciding with the continuation of the Interim Underground Stabilization (IUS) program (tailings work);
- No 15-minute average particulate matter less than 10 microns in diameter (PM₁₀) concentrations above the established Risk Based Action Level (RBAL) criteria were measured at the fenceline locations during the week. PM₁₀ concentrations measured at the fenceline locations remained typical of background concentrations;
- No 15-minute average total suspended particulate (TSP) concentrations above the established RBAL were measured at the fenceline locations during the week;

Community Stations

- There were no continuous 24-hour average concentrations of particulate matter less than 2.5 microns in diameter (PM_{2.5}) and no continuous 24-hour average PM₁₀

concentrations above the referenced criteria measured at the community stations during the week;

- Laboratory results from TSP, PM₁₀, and trace metals (including arsenic) samples measured on December 13 and 16, 2014 at the community stations were less than the analytical detection limit and/or below the referenced criteria. Laboratory results from samples collected at the community stations after December 16, 2014 are pending;
- There were no additional analytical results received for asbestos. Laboratory results from asbestos samples collected at the community stations after December 10, 2014 are pending;

Interim Underground Stabilization (IUS) (tailings work)

- Air quality monitoring near the IUS work resumed on January 5, 2015 in support of remaining IUS activities (tailings work);
- There were no 15-minute average PM₁₀ concentrations above the established IUS tailings pond remediation RBAL (180 µg/m³) measured in the vicinity of the tailings ponds during the week;
- Analytical 24-hour arsenic results measured at six locations near IUS work activities around the North and Central Tailings Ponds on December 13, 16, and 19, 2014 were less than the analytical detection limit and/or below the referenced criteria. Analysis of filter results collected after December 19, 2014 is pending.

General Operations

- The AQM program operated as specified during the week ending January 3, 2015 with the exception of:
 1. Data from the PM_{2.5} and PM₁₀ BAM monitors at the NAPS station were not available at the time of this report.

Additional air quality information for the Giant Mine can be found on the NWT Air Quality Monitoring Network web page: <http://aqm.enr.gov.nt.ca>.

Should you have any questions or comments, please contact Adrian Paradis by Telephone: (867) 669-2425 or by E-mail: Adrian.Paradis@aandc-aadnc.gc.ca.

Sincerely,

Adrian Paradis
