Subject: Air Quality Monitoring Weekly Summary - Week Ending in December 9 2017
Date: December 15, 2017 11:44:46 AM
Attachments: [December 9.pdf](#)

Good Morning,

A summary of the Giant Mine ambient air quality monitoring program (AQM) for the week ending December 9, 2017 is as follows:

Fenceline Network:

- The real time fenceline air quality network was shut down for the winter season on November 30, 2017.
- Laboratory results for TSP, PM₁₀, and trace metals (including arsenic) analyses from samples collected on November 12 and 15, 2017 at the fenceline samplers were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of integrated 24-hour arsenic, PM₁₀, and TSP filter samples collected at the fenceline sampling locations on November 9, 2017 after November 15, 2017 are pending.

Community Stations:

- No 24-hour average concentrations of PM_{2.5} and PM₁₀ were measured above the referenced standards at the community stations during the week. PM_{2.5} and PM₁₀

concentrations during the week were typically representative of seasonal background concentrations;

- Laboratory results from TSP, PM₁₀, and trace metals (including arsenic) samples collected on November 15, 2017 at the community stations were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of community station filters collected after November 15, 2017 are pending;
- Laboratory results for asbestos analyses from samples collected on November 15, 2017 at the community stations were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of asbestos samples collected at the community stations after November 15, 2017 are pending;
- There were no NO₂ concentrations measured at the Niven Lake community air monitoring station above the NWT Ambient Air Quality 24-Hour Standard of 106 parts per billion (ppb) or the 1-Hour Standard of 213 ppb during the week. Table 1 summarizes the daily hourly maximum concentrations and the daily 24-Hour average concentrations measured at the Niven Lake community station during the week.

Table 1

Niven Lake Community AQM Station NO₂ Concentrations

Date	Maximum One-hour Average (ppb)	24-hour Average (ppb)
December 03, 2017	11.3	3.2
December 04, 2017	14.1	4.3
December 05, 2017	12.3	4.8
December 06, 2017	12.4	4.9
December 07, 2017	9.3	3.2
December 08, 2017	4.7	1.8
December 09, 2017	3.6	1.6

General Operation:

The AQM program operated as specified during the week ending December 9, 2017.

Sincerely,

Natalie Plato

RE: Air Quality Reports for the Week of December 9, 2017.

A summary of the Giant Mine ambient air quality monitoring program (AQM) for the week ending December 9, 2017 is as follows:

Fenceline Network:

- The real time fenceline air quality network was shut down for the winter season on November 30, 2017.
- Laboratory results for TSP, PM₁₀, and trace metals (including arsenic) analyses from samples collected on November 12 and 15, 2017 at the fenceline samplers were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of integrated 24-hour arsenic, PM₁₀, and TSP filter samples collected at the fenceline sampling locations on November 9, 2017 after November 15, 2017 are pending.

Community Stations:

- No 24-hour average concentrations of PM_{2.5} and PM₁₀ were measured above the referenced standards at the community stations during the week. PM_{2.5} and PM₁₀ concentrations during the week were typically representative of seasonal background concentrations;
- Laboratory results from TSP, PM₁₀, and trace metals (including arsenic) samples collected on November 15, 2017 at the community stations were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of community station filters collected after November 15, 2017 are pending;
- Laboratory results for asbestos analyses from samples collected on November 15, 2017 at the community stations were less than the analytical detection limit and/or below the referenced standard. Laboratory analyses of asbestos samples collected at the community stations after November 15, 2017 are pending;
- There were no NO₂ concentrations measured at the Niven Lake community air monitoring station above the NWT Ambient Air Quality 24-Hour Standard of 106 parts per billion (ppb) or the 1-Hour Standard of 213 ppb during the week. Table 1 summarizes the daily hourly maximum concentrations and the daily 24-Hour average concentrations measured at the Niven Lake community station during the week.

Table 1
Niven Lake Community AQM Station NO2 Concentrations

Date	Maximum One-hour Average (ppb)	24-hour Average (ppb)
December 03, 2017	11.3	3.2
December 04, 2017	14.1	4.3
December 05, 2017	12.3	4.8
December 06, 2017	12.4	4.9
December 07, 2017	9.3	3.2
December 08, 2017	4.7	1.8
December 09, 2017	3.6	1.6

General Operation:

The AQM program operated as specified during the week ending December 9, 2017.

Sincerely,

Natalie Plato
Deputy Director
Giant Mine Remediation Project
