Subject: Giant Mine AQM weekly summary report for the week ending November 29, 2014
Attachments: AQM Weekly Summary Nov 23-29, 2014.pdf

Greetings,

Attached is the AQM weekly summary report for Giant Mine for week ending November 29, 2014.

In discussions with the Giant Mine Working Group, in lieu of the detailed weekly reports the project has decided to provide weekly summaries and a detailed monthly report. This is done to make the reporting more useful to users, while still maintaining the level of details previously provided.

A summary of the report is provided below:

Fenceline network:

- No 15-minute average particulate matter less than 10 microns in diameter (PM₁₀) concentrations above the established Risk Based Action Level (RBAL) criteria were measured at the fenceline locations during the week. PM₁₀ concentrations measured at the fenceline locations remained typical of background concentrations;
- No 15-minute average total suspended particulate (TSP) concentrations above the established RBAL were measured at the fenceline locations during the week;

Community stations

- There were no continuous 24-hour average concentrations of particulate matter less than 2.5 microns in diameter (PM_{2.5}) and no continuous 24-hour average PM₁₀ concentrations above the referenced criteria measured at the community stations during the week;
- Laboratory results from asbestos samples collected on November 1, 4, 7, 10, 2014 at the community stations were less than the analytical detection limit and/or below the referenced criteria. Laboratory results from asbestos samples collected at the community stations after November 10, 2014 are pending;

Interim Underground Stabilization (IUS) (tailings work)

- There were no 15-minute average PM₁₀ concentrations above the established IUS tailings pond remediation RBAL (180 µg/m³) measured in the vicinity of the tailings ponds during the week;

Roaster Deconstruction

- No air quality monitoring was conducted for the Roaster Deconstruction as the deconstruction work at the Roaster was completed on November 14, 2014. The air quality monitoring program was completed on November 14, 2014;

General Operations

- The AQM program operated as specified during the week ending November 22, 2014 with the exception of:
 1. The PM₁₀ BAM monitor at the NAPS station was not operating during the week due to water damage to the monitor and is waiting repair.

Dear: Mr. Hagen,

RE: Water Licence MV2012L8-0010 – Air Quality Reports for the Week of November 23

This report is meant to satisfy commitments made in the May 21, 2013, responses to review comments on the roaster plans. Our commitment was to provide weekly summaries of the following data:

- PM₁₀ measurements captured by the contractor and the fence-line program;
- All other available and quality assured data, including TSP, trace elements (metals) and asbestos data.

In discussions with the Giant Mine Working Group, in lieu of the detailed weekly reports the project has decided to provide weekly summaries and a detailed monthly report. This is done to make the reporting more useful to users, while still maintaining the level of details previously provided.

In summary for the week of November 23 – November 29, 2014, 2014:

Fenceline network:

- No 15-minute average particulate matter less than 10 microns in diameter (PM₁₀) concentrations above the established Risk Based Action Level (RBAL) criteria were measured at the fenceline locations during the week. PM₁₀ concentrations measured at the fenceline locations remained typical of background concentrations;
- No 15-minute average total suspended particulate (TSP) concentrations above the established RBAL were measured at the fenceline locations during the week;

Community stations

- There were no continuous 24-hour average concentrations of particulate matter less than 2.5 microns in diameter (PM_{2.5}) and no continuous 24-hour average PM₁₀ concentrations above the referenced criteria measured at the community stations during the week;
- Laboratory results from asbestos samples collected on November 1, 4, 7, 10, 2014 at the community stations were less than the analytical detection limit and/or below the referenced criteria. Laboratory results from asbestos samples collected at the community stations after November 10, 2014 are pending;

Interim Underground Stabilization (IUS) (tailings work)

- There were no 15-minute average PM₁₀ concentrations above the established IUS tailings pond remediation RBAL (180 µg/m³) measured in the vicinity of the tailings ponds during the week;

Roaster Deconstruction

- No air quality monitoring was conducted for the Roaster Deconstruction as the deconstruction work at the Roaster was completed on November 14, 2014. The air quality monitoring program was completed on November 14, 2014;

General Operations

- The AQM program operated as specified during the week ending November 22, 2014 with the exception of:
 1. the PM₁₀ BAM monitor at the NAPS station was not operating during the week due to water damage to the monitor and is waiting repair.

Additional air quality information for the Giant Mine can be found on the NWT Air Quality Monitoring Network web page: <http://aqm.enr.gov.nt.ca>.
