Good day Tim.

I hope things are well on your end. I wanted to provide you with a brief update with regard to the outstanding action items in response to your most recent inspection at the Cantung mine site. We have begun dewatering the contaminated water contained within the fuel farm secondary containment. We decided on a different approach than what we had originally discussed, as in-situ treatment wasn't the most effective treatment option for NATCL. After exploring multiple options, NATCL decided utilize the large stock of empty totes that we had stored here on site. 3 loads were sent out yesterday (~54,000 liters) with the assistance of KBL Environmental. Another 3 loads are scheduled to depart site this coming Saturday. All waste manifests will be sent out to the NWT Department of Environment and Natural Resources tomorrow.

NATCL has contracted Teashan Oilfield Services Ltd (<http://teashanoilfield.com/m/>) to come into site in order to inspect and repair the secondary containment. We will be sure to send periodic updates as the project progresses.

Regards,

KC
