***RE: Husky Oil Operations Limited Surface Water and Groundwater Monitoring Plan for Land Use Permit S12X-006***

Dear Mr. Wallace:

Thank you for the opportunity to review the updated Surface Water and Groundwater Monitoring Plan submitted by Husky Oil Operations Limited (Husky). The Sahtú Renewable Resources Board appreciates Husky's effort to implement our recommendations in the new plan. We were also grateful for the opportunity to dialogue with Husky representatives OD Hansen and Cheryl McLean at our Joint Meeting in Tulit'a this week.

Further to our earlier exchanges, we would like to provide the /following recommendations related to the updated plan.

1. Per our comments in two previous letters related to the plan, we submit that the sampling frequency should be increased, multiple sampling events during winter, spring, summer and fall would provide adequate data set from which to establish a clear baseline and account for seasonal variability.
2. All approved water sources should be sampled as part of the water monitoring program.

Sincerely,

Deborah Simmons  
Executive Director
