Hi Tim and Bonnie,

Thanks for the chat this afternoon. As discussed, I am following-up with the below summary of activities that have been completed with regard to the bi-annual settling pond cleaning (Annex A, Part B, Item #4 of our Water Licence). If you have any further questions, please let me know.

- Initial pumping out of the settling pond to facilitate cleaning commenced on August 28th and is ongoing.
- Results from the regularly scheduled weekly CPF outlet water sample (taken on August 26th) are attached. Results meet quality requirements outlined in our water licence. Results from the start surface water release sample from the retention area east of the settling pond (taken on August 20th) are attached. Results meet quality requirements outlined in our water licence.
- Discharge from the retention area east of the settling pond is being managed onsite to prevent erosion.
- Ongoing sampling is being conducted (surface water samples from the retention area at the middle and end of surface water release, composite grab sample from the CPF outlet). If any of these results exceed the limits outlined in our Water Licence, discharge will be stopped and I will notify you.
