Thank you Sabrina, will have it included.

Regards,
Peter

Hi Peter,

Thank you for the update. It would be ideal that the diversion and isolation construction details are included in the map required under Part F (Construction), Condition 3.

I am copying Alex Lynch, Sahtu Regional Water Resource Officer with GNWT-ENR, as the Inspector for Water Licences.

A copy of this message will also be posted to the Public Registry.

Respectfully,
Sabrina

Subject: S17L1-004 Part E Condition 8

Hi Sabrina/Trevor,

This email is to notify the board and inspector that per terms of the water license notification is required if diversion or isolation activities were undertaken. After completing a site assessment to determine water flow in the channels and volumes of flow a small diversion was required to be installed. The diversion installed varied to the plan slightly in that the channel flow was not through the southerly channel as anticipated however was flowing mainly through the north channels. A diversion was installed and culverts to maintain flow for the channel and is functioning as intended. Both dig sites are now isolated and water flow is being maintained through the working area. This information can be included on the detailed map being prepared if you would like.

Any questions let me know. Thank you.
