Subject: RE: Inquiry on Closure and Reclamation Plan - WL S17L1-004 Enbridge KP 180 Digs Project

Hi Peter,

I can appreciate that the deadline for the CRP submission is relatively tight with the intention of having the document approved by the Board prior to commencement of site closure. This said, we can accommodate the requested extension to Feb 28, 2018.

I also appreciate that the scope outlined in Licence S17L1-004 and available guidance on the LWBs websites are not directly applicable with the lands previously disturbed and primary closure goal anticipated to the site stability with monitoring toward recovery of areas as needed (i.e. if spill). I appreciate that you have been engaged with the Inspector(s).

I won't be in the office tomorrow however please let me know when would work well for you and I will be available to discuss.

Thank you,
Sabrina

Subject: Inquiry on Closure and Reclamation Plan - WL S17L1-004 Enbridge KP 180 Digs Project

Hi Sabrina,

We are currently working to complete the CRP for this project and have some inquiries we would like to make with the board regarding documentation requirements for this particular project. We have been using the guidelines for CRP however we think that some items in this plan might not be applicable and we are looking to right size the document to ensure it captures what the board is looking for but also fit for purpose for the scope of work we are undertaking.

Is it possible to have a quick discussion with yourself tomorrow regarding this CRP, and considering today is 15 days since the permit has been issued is it possible to get an extension to next Wednesday, February 28th to complete and submit the plan to the board? The inspector has been engaged through the work to date and is up to speed on plans for reclamation and site completion.

Thank you.
