Hi Rick,

Please let us know if you have any further questions.

Thank you,
Sarah

Hi, Thank you for your questions:

The dock is obviously not located in the best place due to being in the open and subject to adverse weather. A better and more protected site is under consideration further in the bay. The walk out is wooden and approximately 4 foot wide (see picture in application submission) with upright wooden stakes and wire anchored on shore. Attached to the end (past the boulders and approx depth of water is 5 feet) is also planks of about 10 x 14. This size is needed to ground the float plane. Under this is a sealed poly float. The end, if it breaks loose can be retrieved from shore, repaired and re-attached. Any damaged battered wood is replaced. Wood broken off comes to shore and is cleaned up. Damage is seen in early summer although damaging storms can occur throughout the summer/fall season.

When drilling is on land and not near water, the filtering system is not required. When the drill is set up on ice or there is a possibility of the discharge water entering a body of water, the filtering system is implemented. The discharge water is cleansed by the filtering system.

I trust this answers your questions adequately. Please do not hesitate to contact me direct at this email address if you need further explanation,

Regards,
Ellen Clements

Hello Ellen

Rick Walbourne with Department of Fisheries and Oceans had these question's for you, if you can reply back before the comment deadline, which is set for August 31, that would be great.

Thanks,
Roberta

Good afternoon Sarah/Roberta,

I took a look at the subject LUP application today and was wondering if you could provide some clarification in a couple of areas.

- There is mention throughout the application of an existing dock located near the camp site which allows float plane access in the summer. Additionally, there is reference to annual repairs required at this dock as a result of severe storms and ice batter. Could you clarify the type of dock structure that is located at the site and the extent, methods and timing of repairs that occur each year?
- Although there are various statements that discharge will not enter waterbodies in a couple of areas there is the sentence "When discharge could enter a water body a Poly-drill system filters the discharge....". Could you clarify to what this sentence refers?

I will submit formal comments prior to the deadline.

Thanks,

Rick
