

TerraX Minerals Inc.'s is applying to the MVLWB to amend, merge and expand its existing Land Use Permits and to apply for a Class B Water Licence for the Yellowknife City Gold Project due to growth in the area being explored. If approved, this would stream line administration, allow more drills to operated and shorten the years to an investment decision to move forward. Interested parties may review the application binders and submit comments to the MVLWB's web site in December.
