---

Hello David,

Thanks for the follow-up on new authorizations with security deposit requirements. I believe the Department's of Environment and Natural Resources and Lands will need to review the new authorizations requirements and provide Canadian Zinc with reasonable responses. We will be in touch.

Best regards, David

Gentlemen, the MVLWB recently issued new amalgamated permits for the mine site for mining and milling and exploration, MV2021D0005 and MV2021L2-0004. These permits are intended to replace existing mining and milling permits MV2020D0007 and MV2020L2-0003, and existing exploration permits MV2020C0008 and MV2019L2-0006.

The new permits require security 90 days after issue of \$561,338 and \$1,830,648 respectively. These amounts are the aggregates of the securities defined in the existing mining and milling and exploration permits, which are held by Lands and ENR. The Board elected not to increase the pre-construction security aggregate totals in the new mining and milling permits.

CZN wishes to retain the existing exploration permits for the time being because exploration is still underway, a construction decision has not yet been made, and continuing exploration under the new mining and milling permits could result in new approval requirements. However, CZN does not need to retain the existing mining and milling permits as they are now obsolete. Accordingly, CZN supports the cancellation of MV2020D0007 and MV2020L2-0003.

We trust that this arrangement will mean that CZN will be in compliance with the security requirements defined in MV2021D0005 and MV2021L2-0004 once 90 days has elapsed post-issuance.

Please advise if you have any concerns regarding the above.

Thanks.
