Attention: Tyree Mullaney

Dear Tyree,

As per our phone conversation, I am writing this letter to answer the questions put forward by the MVLWB staff during their review of the Timberworks Land Use Permit Application.

Many of the questions were regarding the temporary camp Timberworks may need to construct in order to provide room and board for the personnel conducting the harvesting operations.

Timberworks first preference would be to have the harvesting workforce stay in Ft. Resolution and therefore Timberworks would not require a camp.

However, if we need a camp, we will locate it on durable ground or a previously disturbed area such as a gravel pit.

- 1) a) Any camp structures will be located a minimum of 31 m from any waterbody and any temporary fuel storage sites will be at least 100 m from any waterbody.
- b, c) There may be up to 10 portable trailers. Each trailer being approximately 720 square feet in size. The trailers are 12 feet wide by 60 ft long. Different camps may have some variation in specific sizes of trailers but 12 x 60 is a fairly common unit, for a 25 person camp.
- d) I expect our winter operations to start under frozen conditions in November and then happen until the end of March still under frozen conditions. This would mean approximately 150 days for 25 people or 3,750 person days.
- e) I only expect 25 people to be on site at any given time.
- f) We will haul potable water for the camp's needs from Ft. Resolution.
- g) I anticipate each person in the camp will use approximately 100 liters of water per day. The 25 person camp will therefore use approximately 2500 liters of water per day.

I believe that I have planned for the maximum number of people required to be in camp and calculated the water usage as a maximum number, therefore any variations in number of people and water usage will likely be lower than what I have projected.

Further to that, I would like to utilize existing accommodation in Ft. Resolution, as well as people working from home in Ft. Resolution rather than in camp. This may further reduce the size and utilization of the camp.

However, it is prudent to apply for a fully functioning camp capable of accommodating the entire harvesting workforce, which is what I have done.

If you have any further question for me regarding this Land Use Permit Application, please don't hesitate to call.

Sincerely,

Robert Mills
