**Eagle Plains
Resources Ltd.**

Sahtu Renewable Resources Board recommendations for wildlife mitigation of Eagle Plains mineral exploration project in the Tulita District (Licence No. S07C-006)

- 1) Land use operations will be suspended temporarily if caribou, moose, grizzly bear and/or sheep are spotted within 500m of any work/camp site. Operations may resume once the animal(s) have left the area.
- 2) To reduce stress, where possible, all aircrafts used will avoid flying low over wildlife and maintain a minimum altitude of 650 m (except for landing and take off).
- 3) DFO approved screens will be placed on all water intake pipes to prevent the uptake of fish.
- 4) All equipment will be cleaned prior to initial use to prevent the spread of invasive vegetation species.
- 5) If re-seeding is required, every effort will be made to use a native seed source or, if not possible, to ensure that an uncontaminated seed source is used.
- 6) All sumps (grey water and drill fluids), fuel cache, and pit privies will be located at least 100 meters from the nearest high water mark of a water body.
- 7) Drip pans will be located on drilling platforms to contain possible leaks and minimize the risk of contamination to the environment.
- 8) Storing refuse in a manner likely to attract wildlife is a violation of the Wildlife Act. If garbage is going to be stored on site, it must be in a sealed container, to prevent wildlife from being attracted to the odours. The Department of Environment and Natural Resources Food and Waste Management Guidelines (available from Karin Clark, Ph: 867-920-6362) will be adhered to.
- 9) A brief summary will be provided to the Sahtu Renewable Resources Board (SRRB) one month after the end of each operation season. This report should include a map (include GPS locations if available) and outline any wildlife encounters or environmental accidents in the previous season. Wildlife mortalities will be reported to the SRRB immediately.
