Subject: Landuse Report for SC07-005 and 006
To: Stephen Deschene

Hey Stephen and Thomas,

Here is the landuse weekly report for the week of Aug 13-19th. We will be ending our landuse operations sometime between August 29th and September 1st. I will send another email when the date is firm.

Regards,

Aaron Higgs

Project Manager, Selwyn Recce

Weekly Land Use Progress Report to Indian and Northern Affairs Canada

Report to: Steve Deschene
Land Use Inspector
Department of Indian and Northern Affairs
Norman Wells, NWT

Date: Aug 19, 2011

Company: TerraLogic Exploration Inc.

Land Use Permit: S07C-005 and S07C-006

Reporting Period: Start: Aug 13, 2008; End Aug 19 (Midnight), 2011

Base Camp and fuel storage area: Willow Handle Lake Airstrip

Base Camp and fuel storage area Location: 64° 06' 12" N Latitude, 129° 49' 15" W Longitude

Persons Responsible: Aaron Higgs, Project Manager, TerraLogic Exploration Inc.
Glen Hendrickson, Camp/Logistics Manager, TerraLogic Exploration Inc.
Jesse Campbell, President, TerraLogic Exploration.

Contact Phone Numbers: Willow Handle Lake Camp: 1-778-786-0734
TerraLogic Office – Cranbrook BC: 1-778-520-2000

Weekly Report:

Field work continued during the week of August 13 – Aug 19th consisting of prospecting, geological mapping and soil, silt and rock sampling. There are only a few weeks left in the program. The crews begin to leave on the 21st, and a smaller crew will continue until the end of the month. The actual end date is yet to be determined, it will be finalized on Monday, but we are looking at somewhere between Aug 29th and Sept 1, 2011. A follow up email will be sent when the date is final. By the time of land use operation completion, all fuel and empty drums will be brought back to Willowhandle from the Dudley Lake cache. Fuel caches will remain at Bronco, Gayna River, Willowhandle and 222 Airstrip. The fuel at the 222 Airstrip will be used for a program in the Yukon over the month of September, 2011, after which point, all empty drums will be flown out into the Yukon. Much of the equipment and materials at the Willowhandle Base Camp will be stored into the Dry shack for the winter, while all materials not suitable for winter storage will be flown out of camp into the Yukon for transport back to Cranbrook, BC.

All camp and field activities were routine and all conditions attached to Land Use Permit Numbers S07C-005 and S07C-006 were complied with.

Wildlife / Environment Monitor on site:

Rhea Macdonald (Norman Wells Renewable Resource Council) August 13 – Aug 19th, 2011
Wildlife activity was monitored by the Wildlife / Environmental monitor based at the camp. A wildlife log is kept at camp and is updated daily by all project personnel.

Fuel Management:

All fuel is stored in 205 litre teflon-lined steel drums. The jet fuel is stored at the Willow Handle

Lake airstrip and diesel is stored at the camp site for the oil stoves used for heating. Gasoline is stored at the campsite and used for small gas powered appliances and generators. The barrels at camp are checked daily for leaks. The fuel inventory is given in the following list:

Location	Lat	Long	Total Jet	Full Jet	Total Gas	Full Gas	Total Diesel	Full Diesel	Propane – 100L	Propane - 20L
Gayna River	64° 56' 41"	130° 41' 15"	0	0	0	0	12	12	0	0
Bronco	63° 55' 53"	130° 26' 25"	4	0	0	0	9	9	0	0
Willowhandle Lake	64° 06' 12"	129° 49' 15"	21	18	2	1	12	4	7	4
222 Airstrip	63° 17' 58"	129° 17' 58"	16	4	0	0	0	0	0	0

The totals at Bronco and Gayna River have not changed since the land use permits were last operational in 2008. Empty barrels are back hauled to Norman Wells to the fuel distributor for disposal, on each returning supply flight.

Garbage Disposal:

Food and burnable waste are incinerated daily in camp. Non-burnable items such as metal, juice cans and wet organic garbage, are stored in a bear-proof steel container then sent to Norman Wells for disposal in the land fill on each return flight from the Willow Handle camp.

Transportation:

One A-start helicopter operated by Fireweed/Bighorn Helicopters is resident on site based at the Willow Handle Lake camp. Supply flights are arriving in camp via North-Wright Aviation, from Norman Wells. The float-equipped Twin Otter or Porter are the main aircraft used for servicing the camp.
