Subject: RE: Follow up regarding WL conditions for Deline Sewage Lagoon Decant

Hi Kirk,

I think I may have found source of confusion, it seems the faxed memo may be referencing the previous WL ([S00L3-002](#)) where SNP 0555-3 is the point of discharge from secondary sewage lagoon, which in the current WL is designated as 0555-1. Can you please confirm?

Kind Regards,

Subject: RE: Follow up regarding WL conditions for Deline Sewage Lagoon Decant

Hello Kirk,

We received your fax of May 31, 2015 this morning which indicates that the Charter Community of Deline Public Works Department wants to commence decanting of the Sewage Lagoon at SNP 0555-3 location. The requested location is described as 'runoff from the solid waste disposal site' and a deviation from the approved location of discharge such that Board approval would be required. Our next Board meeting is scheduled for June 29, 2015. We would require justification for the requested location (e.g. why at landfill, what is concern with discharging to approved location) as well as indication that required effluent testing has been initiated. If the Public Works Department decides to decant at the approved location, only notification to the Board is required.

Please feel free to contact me if you have any questions.

Subject: Follow up regarding WL conditions for Deline Sewage Lagoon Decant

Good morning Mr. Dolphus,

Thank you for your call on Wednesday indicating that a decant of the sewage lagoon will be occurring. I just wanted to follow up to clarify requirements outlined in the current Water Licence ([S12L3-006](#), Part D, Items 2-8), relate to decanting of the Sewage Lagoon. Notification to the SLWB and GNWT Inspector is required at least 10 days prior to initiating (Part D, Item 6). Stephanie Hughes (cc'd on this message) is the Inspector for Water Licences in the Sahtu and I understand you have already been in contact.

It the Board's understanding that the new sewage lagoon, although commissioned, is not currently in use and as such effluent from the lagoon will be decanted to the area described in the WL application dated October 3, 2012 (e.g. at Surveillance Network Program (SNP) Station Number 0555-1 (effluent at point of discharge from the secondary sewage lagoon), not wetland area associated with new lagoon described in the [Sewage Lagoon Operation & Maintenance Manual](#)). The sampling and analysis requirements for effluent discharge are detailed in the SNP section of the WL (at the beginning and every three days thereafter during period of decant) and shall meet following criteria as per Part D, Item 2:

- Fecal Coliforms: 10^4 CFU/100ml
- BOD₅ : 80mg/L
- Total Suspended Solids: 100mg/L

Can you please confirm that decants associated with the new Sewage Lagoon would occur at SNP 0555-4 (effluent at point of discharge to wetland).

I also wanted to take this opportunity to remind you that the 2014 Annual Report (required under Part B, Item 1 of the WL) has not yet been received. Attached is a template for the report. Please submit at your earliest convenience.

Please feel free to contact me if further clarification is needed.

Kind Regards,
