**Memorandum RE: Approval for Movement of Treated Soils
Norman Wells Airside Land Treatment Unit
Norman Wells, Northwest Territories X0E 0V0**

Dear Ms. Bergsma:

The following memo documents the sampling results for soil stockpiled within the bermed areas of the Norman Wells Airside Land Treatment Unit (LTU), located on the Norman Wells Airport lands as part of Transport Canada's (TC) Sahtu Land and Water Board Type B Water Licence S17L8-003 and Type A Land Use Permit S17X-004. This memo has been prepared by BluMetric Environmental Inc. (BluMetric) on behalf of TC.

LTU SOIL INVESTIGATIONS

BluMetric has supported the maintenance and sampling work that occurred at the Norman Wells LTU facility in 2017/2018 and has provided supervision for local contractor HRN Contracting.

Soil covering the liner within the LTU has been screened using a PID to assess the potential for hydrocarbon impacted soils and characterization soil sampling was conducted to identify any areas of suspected contamination. Soils that did not indicate the presence of contamination and did not produce elevated soil vapour readings have been stockpiled within the bermed area and

BluMetric Environmental Inc.

4916 49th Street, Yellowknife, Northwest Territories, Canada X1A 1P3
Post Office Box 11086, Yellowknife, Northwest Territories, Canada X1A 3X7

www.blumetric.ca

have undergone comprehensive soil sampling to evaluate the soil quality based on the Treated Soil Criteria defined in the SLWB Type B Water Licence S17L8-003.

BluMetric has conducted soil sampling to meet or exceed the minimum sampling requirements for LTU closure outlined by the SLWB Water Licence (S17L8-003). A summary of stockpile size and the number of soil samples collected and analyzed is presented in Table 1 below to demonstrate that the sampling density meets the SLWB Water Licence requirements.

Table 1: Stockpile Sampling Summary

Stockpile Number	Estimated Volume (m ³)	Total # of Composite Soil Samples Collected
Stockpile 2	84 m ³	2 (SP2-1, SP2-2)
Stockpile 6	210 m ³	2 (SP6-1, SP6-2)

According to Water Licence S17L8-003, soil volumes of 51 m³ – 500 m³ require two (2) composite samples. The sampling densities presented in Table 1 above meet or exceed this requirement.

Soil samples were submitted to ALS Laboratories in Edmonton, AB for rush analyses.

The analytical results for the stockpiles were reviewed and are presented in Tables A-1 through A-5 in Attachment A. No exceedances of the SLWB Water Licence Treated Soil criteria were noted.

BluMetric is requesting permission to move these soil stockpiles out of the LTU bermed area and into the previously approved laydown area in order to facilitate further characterization of the cover soils and to conduct the sub-liner confirmatory test pitting. Your timely response to this request is appreciated in order to ensure continuity on the work site as we would like to complete the sub-liner characterization prior to freeze-up.

CLOSURE

The information presented within this memo has been prepared for the Sahtu Land and Water Board, Public Services and Procurement Canada and Transport Canada. Any use a third party makes of this report, any reliance on the report, or decisions based upon the report, are the responsibility of those third parties unless authorization is received from BluMetric Environmental Inc. in writing. BluMetric Environmental Inc. accepts no responsibility for any loss or damages suffered by any unauthorized third party as a result of decisions made or actions taken based on this report.

If you have any questions please do not hesitate to contact the undersigned.

Respectfully submitted,

BluMetric Environmental Inc.

Sabrina Penfold, B.Sc. GIT.
Environmental Scientist

Andrea Jenney, P.Eng.
Senior Engineer
