---

Sabrina,

Please see e-mail for notification that TC will be installing two more background gw monitoring wells.

As the permit did not specify the number of wells to be drilled, we agreed that the new wells could be drilled under the existing permit and conditions for notification and location map.

Bonnie

Hi Bonnie,

Thank you for taking the time to talk today.

I just thought I should follow up so that you have my contact info.

As discussed, TC will plan to move forward with installing two new monitoring wells at the Norman Wells Airport under the S17X-004 Land Use Permit. TC or its consultant will provide a drill target map to the Board and an inspector prior to commencement. The field supervisor will also contact an inspector prior to mobilization. All of the remaining conditions in the permit will also be adhered to.

Please feel free to call me with any questions or concerns.

Sincerely,

Reid Campbell
