ENBRIDGE PIPELINES (NW) INC.
Waste Management Plan
Line 21 Planned Maintenance at KP 158 near Little Smith Creek

August 2020, Rev. 1 - 18-8582
Plain Language Summary

Enbridge Pipelines (NW) Inc. (Enbridge) is proposing to replace a segment of the Line 21 pipeline southeast of kilometre post (KP) 158 near Little Smith Creek in the Northwest Territories (the Project).

This Waste Management Plan (the Plan) has been developed for use by Enbridge and its Contractors and applies to all Project activities as described in Section 2.0. It was developed in accordance with the Mackenzie Valley Land and Water Board Guidelines for Developing a Waste Management Plan (2011), and aligns with Enbridge’s corporate Waste Management Plan (Enbridge Pipelines Inc. 2018) for Canada. A copy of this Plan will be available to all Project personnel.

This Plan forms part of an application package prepared to satisfy the requirements of the Sahtú Land and Water Board for a Type A Land Use Permit and Type B Water License. In conjunction with this Plan, Enbridge has prepared a Spill Contingency Plan, Closure and Reclamation Plan, and Environmental and Socio-Economic Assessment for the Project. A Project-specific Environmental Protection Plan will be prepared prior to construction.

The purpose of this Plan is to provide guidance to on-site personnel regarding the identification, handling, storage, treatment, transportation, and disposal of different types of Project-related wastes. To be effective, it is important that all personnel are familiar with their responsibilities as they relate to proper waste management. This Plan was developed in consideration of all applicable federal and territorial legislation/regulations related to waste management and applies to the complete life cycle of Project waste, from creation to final treatment and disposal.

This Plan will be effective at the commencement of construction activities and will be updated to reflect site-specific conditions, as required.

1.1 Purpose and Scope of Plan

This Plan has been developed for use by Enbridge and its Contractors and applies to all Project activities as described in Section 2.0. It was developed in accordance with the Mackenzie Valley Land and Water Board (MVLWB) Guidelines for Developing a Waste Management Plan (2011), and aligns with Enbridge’s corporate Waste Management Plan (Enbridge Pipelines Inc. 2018) for Canada. A copy of this Plan will be available to all Project personnel.

This Plan forms part of an application package prepared to satisfy the requirements of the Sahtú Land and Water Board (SLWB) for a Type A Land Use Permit and Type B Water License. In conjunction with this Plan, Enbridge has prepared a Spill Contingency Plan, Closure and Reclamation Plan, and Environmental and Socio-Economic Assessment for the Project. A Project-specific Environmental Protection Plan (EPP) will be prepared prior to construction.

The purpose of this Plan is to provide guidance to on-site personnel regarding the identification, handling, storage, treatment, transportation, and disposal of different types of Project-related wastes. To be effective, it is important that all personnel are familiar with their responsibilities as they relate to proper waste management. This Plan was developed in consideration of all applicable federal and territorial legislation/regulations related to waste management and applies to the complete life cycle of Project waste, from creation to final treatment and disposal.

This Plan will be effective at the commencement of construction activities and will be updated to reflect site-specific conditions, as required.
1.2 Environmental Policy

Enbridge believes that minimizing the environmental footprint and impacts associated with our activities delivers value to shareholders, customers and employees. Enbridge’s Environmental Management System, including its environmental protection program, has been established to protect and sustain the environment throughout the lifecycle of design, construct, maintain and operate, and decommission and abandon, and to anticipate, prevent, manage, and mitigate conditions that could adversely affect the environment.

Enbridge’s Environmental Policy provides the philosophy and approach for responsible environmental management and supports values of integrity, safety, and respect, which guide our actions, policies, procedures and culture.

Enbridge’s goal is to foster an educational, just, and flexible organizational culture where environmental excellence is an integral element in the conduct of our business.

Enbridge is committed to:

- Identifying interactions and potential impacts on the environment;
- Minimizing adverse environmental effects through effective planning and execution;
- Complying with government regulations and applicable industry standards;
- Effectively responding to unanticipated events;
- Providing appropriate training to ensure employees and contract workers understand their responsibility to protect the environment;
- Promoting a culture where environmental excellence is everyone’s responsibility;
- Actively engaging with the public and government regarding environmental activities;
- Learning from past experiences in order to continually improve competency and performance; and
- Maintaining a non-retaliatory culture that encourages reporting and investigation of environmental hazards, potential hazards, near-misses, incidents, and non-compliances.
2.0 Project Description

The Project is located in the Sahtú Region of the NWT, approximately 80 kilometres (km) southeast of the hamlet of Tulita and approximately 140 km southeast of the Town of Norman Wells (see Figure 1 in Appendix A).

The Project is required to protect the Line 21 pipeline from potential impacts of slope instability at a meander bend along Little Smith Creek near KP 158 and to support the continued safe operation of the pipeline.

2.1 Project Components

The Project involves the removal of an approximately 510-metre (m) segment of the existing Line 21 pipeline (nominal pipe size [NPS] 12) and replacing it with a new, approximately 520-m NPS 12 pipeline segment at a greater depth of cover. Enbridge is planning to install the new pipeline segment via horizontal directional drill (HDD) within the existing Enbridge right-of-way (ROW), and no new land rights are required for operation; however, some temporary workspace, located on privately-held Sahtú lands administered by the Tulita District Land Corporation, will be required in order to accommodate construction activities.

The Project will require upgrades to existing access roads, as well as the following temporary infrastructure:

- Construction camps (up to three small camps);
- Laydown yard (fuel and equipment storage);
- Potential barge landing (upgrades to an existing site on the Mackenzie River); and
- Temporary workspace:
  - HDD work sites (entry and exit points, and false ROW for trenchless pipe drag section); and
  - Pipeline stopple/tie-in locations.

Refer to Figure 1 and Figure 2 in Appendix A for the locations of Project components.

2.2 Activities Resulting in the Generation of Wastes

Project activities will result in the generation of various types of wastes. The following subsections describe the types of Project activities that will generate waste and what wastes are typically generated. More detail on the waste types, including approximate volumes, that may be generated by the Project is provided in Section 3.0.
2.2.1 Clearing and Access/Site Preparation

Minor vegetation clearing/brushing will be required along the margins of existing access roads and some clearing and grubbing will be required at the camp site/laydown yard. Vegetation will be cleared on portions of the existing ROW where excavation is required for removal of the existing pipe segment and for the HDD entry and exit points and pipeline stopples/tie-ins, as well as for temporary workspace, where required.

Vegetative/woody debris will be generated from clearing, grubbing, and site preparation activities. These types of materials are considered flammable and must be collected and disposed of in accordance with the NWT Forest Protection Act (RSNWT 1988, c. F-10) and all applicable permits/authorizations.

2.2.2 Pipeline Construction

The replacement pipeline segment will be installed via HDD and will require drilling fluid (composed of inert bentonite clay) and produce drill cuttings. The drilling fluid and cuttings are considered wastes and require appropriate disposal.

In addition, some excavation work will require use of hydrovac equipment. Hydrovac excavation uses pressurized water and an industrial strength vacuum to simultaneously excavate and evacuate soil. This process creates a slurry (soil mixed with water) that is removed by a powerful vacuum into a debris tank. The slurry is a considered a waste product that requires appropriate disposal.

The existing pipe segment that is being removed will be drained into onsite tankage. The contents of the pipe and the pipe segment will be re-injected into the new installed pipeline after it has been tied in and tested.

The new pipeline segment will be hydrostatically tested using a rental fluid comprised of a 50/50 mix of water and glycol. The test fluid will be trucked to and from the Project site in appropriate containment and will not be discharged to the environment.

Other typical wastes that will be generated by pipeline construction include scrap materials (metal, wood), geotextiles, liners, concrete, and spent welding rods, as well as used oils, fuel, lubricants, grease, coolants, filters, etc. from equipment maintenance and servicing. All wastes will be hauled off site and disposed of at approved facilities.

2.2.3 Potential Barge Landing

Construction of the potential barge landing may require the placement of fill material (i.e., sand/gravel). When construction is complete, the barge landing will be removed and the site will be restored, which will require removal of any fill material that may have been used to return the bank of the river to as close to its preconstruction contours as possible. Used fill material will require disposal.
2.2.4 Camp Site(s) and Laydown Yard

The camp site(s) will be used to accommodate construction personnel and provide office space and will include parking space, sleeping quarters, community gathering space, kitchen, and sanitary facilities (toilets, showers, sinks, etc.). The laydown yard will be used for equipment and fuel storage.

The camp site(s) will accommodate up to 80 workers during peak construction (winter 2021). The camp(s) will generate domestic wastes, sewage, and greywater, which will be stored on-site in appropriate containment before being transported off-site for disposal. No wastes will be discharged to the environment.

All non-hazardous camp wastes are expected to be hauled to local disposal or treatment facilities in Tulita. If Tulita cannot accept the wastes, then they will be transported to appropriate facilities in Norman Wells or other approved sites. Written agreements will be put in place with receiving facilities for the acceptance of wastes prior to the commencement of construction.

2.2.5 Contaminated Materials

Spills have the potential to occur as a result of an accident or malfunction during Project activities and can result in contamination of soils, vegetation, or water. In the event of a spill, the Project’s Spill Contingency Plan will be implemented and contaminated materials will be cleaned up and stored in suitable containment on-site until they can be transported to an appropriate disposal facility.
3.0 Identification of Waste Types

The following section identifies the different types of wastes that are anticipated to be generated during Project activities (see Section 2.2). For the purpose of this Plan, the waste types have been categorized as follows:

- Hazardous Wastes;
- Non-Hazardous and Non-Mineral Wastes; and
- Mineral Wastes.

The estimated quantities of each type of waste are provided in Table 2. The anticipated volumes are based on best available information and are subject to change.

3.1 Hazardous Wastes

The predominant source of hazardous wastes generated by Project activities will be from equipment maintenance and servicing, which may result in waste oil, fuel, batteries, lubricants, grease, oil filters, used hoses, and solvents.
Other potential hazardous wastes may be generated by accidents and malfunctions, resulting in contaminated sorbent materials, tarps, soil, vegetation, or water.

The potential environmental effects arising from unmanaged hazardous wastes could include degradation of soil quality, water quality, and terrestrial and aquatic habitat quality, as well as potential adverse effects on the health and safety of on-site personnel.

3.2 Non-Hazardous and Non-Mineral Wastes

Non-hazardous and non-mineral wastes generated by Project activities will include domestic and sanitary wastes (i.e., greywater and sewage), vegetative/woody debris from clearing and site preparation, and construction materials.

The potential environmental effects arising from improperly managed non-hazardous and non-mineral wastes could include increased risk of human-wildlife interactions (wildlife attractants), potential for spills, leaks, and safety incidents, a change in the aesthetics of the Project area, increased fire hazard (woody debris), and degradation of water quality, and terrestrial and aquatic habitat quality.

3.3 Mineral Wastes

Mineral wastes generated by Project activities will include used fill materials (sand/gravel), HDD waste, and hydrovac slurry.

HDD wastes are defined as all materials or chemicals, solid or liquid, associated with drilling; including drill cuttings and drill fluids. For the purposes of the Project, drilling fluids will be made up of water and bentonite-based additives. Water for drilling will be withdrawn from the Mackenzie River, nearby spring-fed waterbodies and/or Little Smith Creek. Drilling fluids will be recycled in a closed loop system to limit the volumes of water required to complete the HDD by separating drill cuttings returned to the surface. Depending on the drilling conditions, some drilling fluids and cuttings may be disposed of during HDD activities to avoid exceeding the temporary on-site storage capacity. Upon completion of the HDD activities, the drilling fluids and drill cutting swill be prepared for on-site or off-site disposal.

The potential environmental effects arising from improperly managed mineral wastes could include degradation of soil quality, water quality, and terrestrial and aquatic habitat quality.
4.0 Management of Wastes

The following subsections provide details on the management procedures for the specific waste types identified in Section 3.0. The management procedures are in alignment with Enbridge’s corporate Waste Management Plan (Enbridge Pipelines Inc. 2018) for Canada and support the measures in the Project-specific EPP.

Waste reduction and recycling have been integrated directly into Project execution procedures to reduce waste generation for all Project components. Materials will be re-used or re-purposed, where possible.

Some wastes will require transportation for off-site treatment or disposal. The type of transportation and tracking documents will depend on the nature of the waste and the location of the appropriate disposal or treatment facility. Minimum requirements for transportation and tracking are outlined below.

Non-hazardous wastes that require off-site transportation from the Project footprint will be transported to local disposal facilities in Tulita. Hazardous wastes will be transported to an appropriate waste facility in Alberta. Appropriate containment will be used to store and transport wastes to avoid off-site impacts.

4.1 Hazardous Wastes

Hazardous materials will be handled, stored, transported and disposed of in accordance with Enbridge’s Waste Management Plan (Enbridge Pipelines Inc. 2018) for Canada, as well as all applicable Workplace Hazardous Materials Information System (WHMIS) and Transportation of Dangerous Goods (TDG) legislation.

All hazardous wastes will be stored in designated storage areas in clearly marked containers at least 100 m away from the high-water mark of any waterbody, in accordance with the Project’s Spill Contingency Plan. Any spills of hazardous wastes will be responded to and cleaned up in accordance with the Spill Contingency Plan. Hazardous wastes stored on-site will be removed from the designated storage areas prior to demobilizing equipment from the work areas and disposed of at approved facilities.

In the NWT, generators of hazardous waste must be registered with the Department of Environment and Natural Resources prior to shipping any hazardous waste. After completing registration, an identification number is issued by the government as proof of authorization for the company and must be used for the shipment of all hazardous wastes by the approved waste generator. Enbridge’s NWT waste generator number is NTG000026.
Hazardous materials must be disposed of at a licensed hazardous waste/Class 1 receiving facility. It is likely that hazardous Project wastes will be hauled to an approved facility in Alberta. In the event that hazardous waste is hauled to a separate jurisdiction (i.e., Alberta), a special hauling license will be obtained.

Each shipment of hazardous waste generated as a result of Project activities in the NWT must be accompanied by a completed, territorially-issued movement document/manifest. Contact the Environmental Inspector for assistance in obtaining the required movement documents.

### 4.1.1 Used Oils, Fuel, Lubricant, Grease, Coolants, Filters, etc.

All used oils, fuels, lubricants, greases, coolants, filters, solvents, etc. produced from routine equipment maintenance and servicing will be captured in appropriate containers, labeled as hazardous waste, and stored in designated areas.

Reference the waste information sheets in Appendix B for the applicable WHMIS and TDG classifications of each specific waste.

### 4.1.2 Hydrostatic Test Fluid

A rental fluid comprised of a 50/50 mix of water and glycol will be used to hydrostatically test the new pipeline segment.

The test fluid will be hauled to the site and stored in a double wall containment tank, or secondary containment will be set up for the tank.

The used test fluid will be collected and hauled off-site in appropriate containment and no fluid will be allowed to be discharged to the environment.

### 4.1.3 Contaminated Materials

The inadvertent release of a hazardous substance can generate contaminated clean-up materials (sorbent materials, tarps), soil, vegetation, or water. In the case of a release of hazardous or otherwise deleterious materials, follow the procedures outlined in the Spill Contingency Plan to stop, contain, and clean up a spill. All contaminated material will be considered hazardous waste and must be stored in an isolated containment structure, which can include the following:

- Tank;
- Bin; or,
- Pit/sump with an impermeable liner and containment berms.

The containment structure must prevent leachate from escaping the containment area and coming in contact with a waterbody or the ground surface.
Follow procedures in the Project-specific EPP to identify and contain potential contaminated materials. Contaminated materials will be disposed of off-site at an approved facility. Proper NWT waste manifests will be used when transporting and disposing of contaminated materials.

4.2 Non-Hazardous and Non-Mineral Wastes

4.2.1 Domestic Wastes

Waste management measures will be implemented to minimize attractants to wildlife, including the following:

- Reduce and properly dispose of garbage, food wastes, and other edible and aromatic substances.
- Store all food and garbage in either: airtight sealed containers, wildlife-proof containers, or in an enclosed area inaccessible to wildlife.
- Store all on-site grease, oils, fuels in wildlife-proof containers or enclosed bear-proof areas.
- Store minimal amounts of wastes on-site and haul wastes off for disposal as often as practical.

Combustible and non-combustible domestic wastes will be separated into two streams as recommended in the Northern Land Use Guidelines for Camp and Support Facilities (Government of Northwest Territories [GNWT] 2015). No incineration of domestic wastes will be undertaken.

Work crews will regularly inspect areas surrounding the camp and work sites to collect and properly dispose of any waste material that has blown off-site.

Domestic solid wastes will be temporarily stored at the camp before being transported to municipal facilities for disposal. Tulita is the preferred location for domestic waste disposal; however, alternate locations have been identified if Project wastes cannot be accepted at the preferred site (refer to waste disposal facilities listed in Section 5.0). Agreements will be put in place with waste disposal facilities prior to hauling any waste off-site for disposal.

Waybills or truck tickets will accompany all waste being hauled off site.

4.2.2 Sanitary Wastes

All sewage and greywater will be temporarily stored in tanks at the camp. Enbridge will seek to dispose of all sewage and greywater at a local waste treatment facility in Tulita. Agreements will be in place with waste treatment facilities prior to hauling any sewage or greywater off-site for disposal.

Waybills or truck tickets will accompany all waste being hauled off site.

In the unlikely event that off-site transportation is temporarily restricted, or pre-arranged disposal facilities are unable to accept wastes, sewage and greywater could reach on-site storage capacity. In
these circumstances, mitigation options could include the construction of a disposal pit. If required, such on-site disposal would proceed in accordance with best practices outlined in the *Northern Land Use Guidelines for Camp and Support Facilities* (GNWT 2015) and in consultation with GNWT Inspectors.

Portable toilets used on-site will be managed by the Contractor. Sanitary wastes collected in the portable toilets will be hauled off-site for treatment and disposal at the supplier’s facility or by removing the contents on-site using appropriate mobile equipment and hauling to an approved waste treatment facility.

### 4.2.3 Construction Materials

Construction material wastes (e.g., scrap wood, scrap metal, liners, geotextiles, concrete, etc.) will be stored in closed top containers in approved areas until they are removed from site and hauled away for disposal. Approval for disposal must be received by the facility operator prior to disposal. The Contractor will coordinate with waste facility operators to ensure the facility can accept the waste types being hauled off-site. Waybills or truck tickets will accompany all waste being hauled off site.

### 4.2.4 Vegetative/Woody Debris

Non-salvageable vegetative and woody debris from brushing and clearing will be collected and moved to an open area (e.g., the gravel pit) where it will be disposed of by burning on-site. Burning will be conducted in accordance with the NWT *Forest Protection Act* (RSNWT 1988, c. F-10) and all applicable permits/authorizations. A burn permit will be acquired prior to burning during the closed season (May 1 to September 30).

Should burning not be permitted, brush and trees less than 13 cm in diameter will be stockpiled and spread back over the temporary workspaces following the completion of construction. If required, the brush and small trees may be mulched to reduce the space required for storing and to reduce the effort to spread materials back on the restored workspace.

### 4.3 Mineral Wastes

Mineral wastes, for the purpose of this Plan, are considered to be natural materials (e.g., clay, sand, gravel, soil) that are used for Project activities (i.e., HDD, hydrovac, fill). The preferred disposal option for mineral wastes is on-site treatment and disposal; however, the contingency disposal plan is to haul mineral wastes off-site to an appropriate facility in the case that the on-site options are determined to not be viable.

#### 4.3.1 HDD Wastes and Hydrovac Slurry

Water will be withdrawn from the Mackenzie River or Little Smith Creek in order to facilitate HDD and hydrovac activities. Water is mixed with inert bentonite clay for HDD activities and with soils for hydrovaccing.
HDD wastes (drilling fluid and cuttings) from the Project will be managed according to industry-accepted best management practices outlined in the Alberta Energy Regulator (AER) Directive 050: Drilling Waste Management (AER 2019) guidelines. Drilling wastes will be managed on-site to the extent possible. Drilling fluids will be recirculated during drilling activities to limit the volume of water required and waste generated through the drilling process. Drilling wastes will be stored on-site in bins or tanks while awaiting disposal. All efforts will be made to prevent drilling fluids and untested drilling wastes from coming into contact with the ground or from migrating off of the Project work site, through the use of secondary containment, collection pits, and drip trays, where required.

A common disposal solution for HDD and hydrovac mineral wastes is mix-bury-cover into the subsoil. The feasibility of mix-bury-cover is dependent upon the receiving substrate and the results of sampling to assess the wastes and determine if they need to be treated prior to disposal. If permitted by the SLWB, and pending substrate testing, mix-bury-cover of the Project’s HDD and hydrovac wastes may be conducted along the trench line of the removed pipe segment in order to help backfill the space left by the removed pipeline and any remaining wastes may be disposed of at the on-site gravel pit or another suitable location nearby. Sumps will be excavated to mix the drilling wastes with native subsoil. Drilling wastes will also be analyzed for applicable parameters to assess against criteria set out in the AER (2019) Directive 050 guidelines.

If, upon testing, the HDD wastes or hydrovac slurry are deemed unsuitable for mix-bury-cover or the substrates on-site are not appropriate to receive the wastes, or the SLWB does not permit on-site disposal, then the HDD and hydrovac wastes will be hauled off-site for disposal at an appropriate facility. All transports hauling drilling wastes off-site will have appropriate manifests, waybills or truck tickets, based on the type of waste.

### 4.3.2 Granular Materials

Granular (fill) materials (i.e., sand/gravel) may be required for construction and operation of the potential barge landing site. The Project may utilize materials from the gravel pit located adjacent to the camp/laydown yard, if the materials are determined to be clean and suitable for fill. All granular material placed at the potential barge landing site will be collected, to the extent feasible, upon completion of the Project and returned to the gravel pit and/or disposed of accordingly. The Environmental Inspector will be consulted prior to removing the material from site to determine the appropriate requirements for disposal.
Waste disposal will occur throughout construction as part of general maintenance activities. Appropriate waste receptacles for the various waste types to be encountered on the Project will be available at suitable locations throughout the camp and work sites. Wildlife-proof containers will be used to store edible, organic, and/or aromatic wastes and wastes will be stored in fenced-off areas or inside buildings that are inaccessible to wildlife. Secondary and/or tertiary containment will be set up and maintained, as required, for all hazardous wastes (storage requirements are outlined in the Spill Contingency Plan).

Wastes being hauled off-site will be transported by truck on the winter road. Some wastes may need to be hauled by barge on the Mackenzie River, following final site clean-up and demobilization. Wastes will be stored in appropriate containment for transportation.

Waste disposal facilities for all wastes types being hauled off-site will be identified prior to hauling any wastes and disposal agreements will be put in place with all receiving facilities. All applicable facility guidelines and requirements will be met to ensure wastes will be accepted. Waste facility arrangements will be made closer to construction. Table 3 provides a list of potential waste facilities that may be able to accept the wastes generated by the Project.

6.0 Training

Project-specific EPP training is required by all individuals working on Project sites. The EPP training will include a review of permit conditions, mitigation plans (including this Plan), and site-specific environmental mitigation for the Project. The level of EPP training will be dependent on the role and responsibility of the individual. Managers and foremen/supervisors with additional responsibility for the Project will receive more detailed EPP training to ensure they understand all permit conditions, environmental policies, and required environmental mitigation and can effectively direct employees. Field workers will receive a level of EPP training tailored to the execution of their scope of work.
7.0 Monitoring and Evaluation

The Environmental Inspector will be responsible for ensuring all Project personnel are aware of environmental conditions, commitments and guidelines for the Project and that the Project is executed in compliance with this Plan, the EPP, and all other associated management plans and contingency plans, as well as applicable regulatory permits and approvals.

The Environmental Inspector will work with Indigenous Monitors to oversee the implementation of this Plan in conjunction with the EPP. Regular inspections will occur over the course of the Project and daily inspection reports will be prepared and distributed to the Project team.

This Plan will be updated as required and all Enbridge personnel are encouraged to comment and assist in its improvement.
8.0 Contingencies

In the event that an unforeseen issue arises during construction for which no mitigation measures have been approved, the Enbridge Senior Environmental Advisor and the Environmental Inspector will develop appropriate measures in consultation with the Construction Manager, Project Manager and, when appropriate, regulatory agencies.

New or amended mitigation measures will be incorporated into this Plan by the Enbridge Senior Environmental Advisor and the revised Plan will be reviewed by the Project Manager and Construction Manager before it is issued to the Project team with an issued and effective date. The revised Plan will come into effect on the effective date. The Environmental Inspector will be responsible for distributing the revised copy of the Plan to all appropriate Project personnel.

If an issue arises and an adequate resolution cannot be determined between the Environmental Inspector and the Construction Manager, it shall be escalated to the Project Manager who will discuss and resolve the issue with the Enbridge Senior Environmental Advisor.

Appendix B

Waste Information Sheets
Acid (un-neutralized)
Waste Information Sheet

General Information

Original Use: Water treatment, descaling, and as a cleaning agent in on-site laboratories for cleaning viscometers, etc.
Synonyms: Acetic, Chromic, Hydrochloric acids.
Physical State: Corrosive liquid.
Components: Specific to the waste acid and use. Various concentrations from 1% to concentrated.

Potential Hazards

Class (WHMIS): E; D1A; D1B
MSDS: Use MSDS of specific acid.
Hazard Symbols:  
Protective Equipment:  

Environmental: Leaching of metals if acid comes in contact with soil. Possible groundwater contamination if spilled or leaks at storage sites. Surface water contamination if not neutralized.
Health: Respiratory irritant. Corrosive on contact. Severe burns. Avoid contact or inhalation of fumes.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Storage: Store in a corrosion resistant (plastic or lined) container at field facility. Keep closed. Store in a cool, well ventilated place away from high pH materials.

Treatmen / Disposal:
- Return to supplier if possible (if product is not contaminated).
- Neutralization may be required by either ENBRIDGE or waste contractor.
- Alberta: dispose in a Class Ia disposal well (pH 4.5 - 12.5), or a Class Ib well (pH 6.0 - 9.0).

Comments:
- Reduce potential wastes by ordering acids in bulk.
- Alberta: Heavy metal content may restrict the usage of Class Ib disposal wells.
- Deep well disposal is only a limited option in Alberta where acids in small quantities may possibly already be mixed with large process or produced water volumes through operations. Best option is with inventory control (reduce), and using a Waste Material Exchange if volumes are large.
- Alberta: Disposal of this material is restricted to acid producers, acid producers may require neutralizing the wastewater before disposal.

Reportable Release Quantity:
- NWT: 5 kg or litres
- Alberta: 5 kg or litres
- Saskatchewan: 5 kg or litres
- Manitoba: 5 kg or litres
- Ontario: Any quantity
- Québec: Any quantity

</tr>
</tbody>
</table>

Placards: Dependent on specific waste chemical.
Comments: Dependent on specific waste chemical. If product was originally supplied as a dangerous good, then waste chemical is also a dangerous good. Use Shipping Name, Class, PIN, etc. of original shipment, unless original chemical properties have changed or contaminated with another dangerous good. If a mixture or solution of two or more dangerous goods, verify TDG Information with the Enbridge Environment Staff.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information? Contact Enbridge Environment Staff in Edmonton.
Asbestos
Waste Information Sheet

General Information

Original Use: Insulation on piping vessels, boiler equipment and building. Building panels. Waste may also be called insulation crysolite, crocidolite, amosite, myosorite, avibest, amphibole.

Physical State: Fibre material, gray, white, or blue. No odor.

Components: Asbestos, may also contain fibreglass and foam materials. Asbestos is a group of impure magnesium silicate materials which occur in a fibrous form.

Potential Hazards

Class (WHMIS): D2A

MSDS: Use MSDS of specific components (e.g.; asbestos) or ENBRIDGE MSDS Asbestos Gasket.

Hazard Symbols: 🎧

Protective Equipment:

Environmental: Known carcinogen to human and animal life.

Health: Various exposure limits dependent on the type of asbestos. Causes asbestosis, lung cancer and mesothelioma.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Waste Dangerous Good
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Double bag waste in properly labeled, sealed, polyethylene bags (minimum 6-mil thickness). If bags breaks, soak area with water and reseal.

Treatment / Disposal: Send / transfer to an approved landfill.

Comments: Notify landfill operator and / or local health board in advance of disposal. Waste must be buried immediately upon arrival at a landfill. Refer to Appendix B of ENBRIDGE Waste Management Plan.

Reportable Release Quantity:
- NWT: Any quantity
- Alberta: Any quantity
- Saskatchewan: Any quantity
- Manitoba: Any quantity
- Ontario: Any quantity
- Québec: Any quantity

Asbestos
Waste Information Sheet
September 2016
Batteries - Alkaline (Dry)
Waste Information Sheet

General Information

Original Use: Batteries for gas detectors. Long life C & D cells, 9 volt, AA, etc.
Physical State: Various solid forms.
Components: Mercury, manganese dioxide.

Potential Hazards

Class (WHMIS): 
MSDS: Mercury, manganese dioxide
Hazard Symbols:
Protective Equipment:

Environmental: Lowers pH in aqueous environments. Battery fluids may have high heavy metals content. Can contaminate soil and water through landfill leachate. Do not incinerate. Small quantity “consumer” household batteries (non-vehicle) do not pose a serious threat to environment if landfilled.

Health: Ingestion of alkali may produce severe pain and burning of the mouth, throat and esophagus. Nausea and vomiting may follow.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Québec: Residual Material

Storage:
Significant volumes: store damaged batteries in corrosion resistant (lined) or plastic drums. Batteries in good condition can be stored on drip pan. Keep containers closed and store in a cool, dry, and well ventilated place, off the ground, away from incompatible materials.

Treatment / Disposal:
(if the 4R options cannot be applied): Landfill - verify with provincial environmental agency or landfill operator. See Disposal Comments.

Comments:
If available, use municipal, supplier, or retailer battery collection programs. Alkaline batteries containing liquids should only be taken to a Hazardous Waste Disposal facility, they should not be landfilled.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A
- TDG (includes loading / unloading): N/A

TDG Information

Shipping Name: Not TDG Regulated – See TDG Comments Below
Class: N/A
PIN: N/A
Packing Group: N/A
Special Provisions: N/A

Placards: N/A
Comments: Small alkaline batteries that are dry inside are not regulated. If the waste is contaminated with dangerous goods, TDG Regulations may apply.

Documentation

Transportation Documents: Truck Ticket or Waybill or Provincial Manifest as appropriate
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Batteries - Dry Cell (Ni-Cd)
Waste Information Sheet
September 2016
General Information

Original Use: Variety of automotive, electric storage, portable or emergency electricity and lighting, and instruments.
Physical State: Various solid forms. Synonyms: Battery acid, battery fluid, lead acid (see also Acids and Caustic).
Components: Sulphuric acid, caustic, lead and various chemicals. May be acid or dry filled. Acid may contain heavy metals and caustics. Household (alkaline) batteries contain carbon, manganese and zinc.

Potential Hazards

Class (WHMIS): E; D1B; D2A
MSDS: Use MSDS of specific components (e.g.; Acid, Lead, Battery Acid, Battery Fluid, Fluid Alkali, Sulphuric Acid.

Hazard Symbols: 
Protective Equipment: 

Environmental: Lower pH in aqueous environments. Battery fluids may have high heavy metals contents. Can contaminate soil and water through landfill leachate. Do not incinerate.
Health: Extremely corrosive vapor and liquids - can cause lung tissue damage. May cause severe burns and permanent tissue damage to eyes and skin. Lead poisoning.

Management Methods

Waste Classification:
NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Manitoba: Hazardous Waste
Ontario: Hazardous Waste (112-C)
Québec: Residual Hazardous Material

Storage: Store damaged batteries in corrosion resistant (plastic or lined) containers at field facility. Undamaged batteries may be stored on a drip pan. Keep containers closed and in a cool, dry, and well ventilated place, off the ground, away from incompatible materials.

Treatment / Disposal: Send to an approved battery recycler.
Comments: Drain batteries of fluids and / or contain for transport. Treat fluids as per “Acid” Waste Information Sheet.

Reportable Release Quantity:
NWT: 5 kg or litres
Alberta: 5 kg or litres
Saskatchewan: 50 kg (10 kg off-site)
Manitoba: 5 kg or litres
Ontario: Any quantity
Québec: Any quantity

TDG Information

<table>
<thead>
<tr>
<th>Shipping Name</th>
<th>Class</th>
<th>PIN</th>
<th>Packing Group</th>
<th>Special Provisions</th>
</tr>
</thead>
<tbody>
<tr>
<td>BATTERIES, WET, FILLED WITH ACID, electric storage</td>
<td>8</td>
<td>UN 2794</td>
<td>III</td>
<td></td>
</tr>
</tbody>
</table>

Placards: Class 8 (in bulk or over 500 kg).
Comments: There are various TDG categories for batteries and battery fluids. The above is one example. OTHER TDG Shipping Names MAY APPLY. Good batteries may be shipped unpackaged, but secured on a drip pan and individually labeled with a Class 8 label and PIN. Poor condition batteries should be shipped in labeled corrosion resistant drums with sorbents.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Onsite quality control laboratories. Organic chemicals are carbon based materials, including solvents and other petroleum-derived products. Inorganic chemicals are non-carbon based materials, including many acids, bases, and mineral based compounds.

Physical State: May be liquid, solid or gas; dependent on specific waste.

Components: Dependent on specific waste. Organic chemicals, Inorganic chemicals - acids, alkalis, and inorganic reagents.

Potential Hazards

Class (WHMIS): B2; B3; B4; C; D; or E

MSDS: Varies with waste chemical.

Hazard Symbols: 

Protective Equipment: 

Environmental: Limited environmental hazard due to small volume. Possible volatile flammable and corrosive liquids. Potential fire hazards.

Health: Health hazard - extent is dependent on the specific chemical.

Management Methods

Waste Classification:

NWT: Hazardous Waste

Alberta: Hazardous Waste/DOW

Manitoba: Hazardous Waste

Saskatchewan: Waste Dangerous Good

Ontario: Hazardous Waste (148-C)

Québec: Residual Hazardous Material

Storage: Collect in lined drums or original containers if recycling. Monitor volumes and chemicals entering containers. Segregate different waste chemicals. Store in a cool, well ventilated area.

Treatment / Disposal:

• Segregate and reuse chemicals on-site if possible.

• Return to supplier if possible.

• Send to a chemical recycling facility.

• Send to an appropriate (approved) waste management facility

Comments: Waste classification is subject to testing.

Reportable Release Quantity:

NWT: 5 kg or litres

Alberta: 5 kg or litres

Saskatchewan: 5 kg or litres

Manitoba: 5 kg or litres

Ontario: Any quantity

Québec: Any quantity

TDG (includes loading / unloading): Dependent on specific waste chemical

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Various – dependent on specific chemical.
Physical State: Various – liquid or slurry. Synonyms: Cleaners, lubricants, epoxies, glues, solvents, etc.
Components: Various – dependent on specific chemical. Refer to supplier information.

Potential Hazards

Class (WHMIS): Dependent on specific chemical.
MSDS: Refer to container label or supplier information.
Hazard Symbols: Refer to container label or supplier MSDS.
Protective Equipment: Refer to container label or supplier MSDS.

Environmental: Possible soil and groundwater contamination from spills.
Health: Dependent on specific product. Refer to container label or supplier information.

Management Methods

Waste Classification:
NWT: Testing Required.
Alberta: Testing Required.
Saskatchewan: Testing Required.
Manitoba: Testing Required.
Ontario: Testing Required.
Québec: Testing Required.

All provinces & NWT: Dependent on specific chemical. Testing may be required.

Storage: Dependent on specific chemical.

Treatment / Disposal:
• Return to supplier, reuse or recycle (dependent on chemical type).
• Send to chemical reclamer / recycler if applicable.
• Send to appropriate (approved) waste management facility.
• Recycle through Waste Material Exchange (if possible, appropriate).

Comments:
• Avoid over-supply. Order in bulk.
• Investigate the use of low toxicity, safer chemicals. Inquire with supplier.

Reportable Release Quantity:
NWT: 5 kg or litres
Alberta: 5 kg or litres
Saskatchewan: 5 kg or litres
Manitoba: 5 kg or litres
Ontario: Any quantity
Québec: Any quantity

**Placards:** Dependent on specific chemical.  
**Comments:** Testing required. Dependent on specific waste chemical. If product was originally supplied as a dangerous good, then waste chemical is also a dangerous good. Use Shipping Name, Class, PIN, etc., of original shipment unless original chemical properties have changed or contaminated with another Dangerous Good. If a mixture or solution of two or more dangerous goods, verify TDG Information with the Enbridge Environment Staff.

**Documentation**

**Transportation Documents:** Truck Ticket or Waybill, TDG Shipping Document, or provincial Manifest / Movement Document, as appropriate.  
**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or District office.

Need further information?  
Contact Enbridge Environment Staff in Edmonton.
Construction and Demolition Material
Waste Information Sheet

General Information

Original Use: Demolition or new construction projects.
Physical State: Various solids.
Components: Clean material (wood, metal, drywall, etc.) which is not contaminated with fiberglass insulation, asbestos, and sulphur. See also Metal - Scrap, Insulation (Asbestos), Insulation (Non-asbestos), and Contaminated Debris and Soil waste information sheets.

Potential Hazards

Class (WHMIS): Not a controlled product.
MSDS: Not applicable.
Hazard Symbols: Not applicable.
Protective Equipment: Follow occupational health / safety and manufacturer requirements for all equipment operations. Use caution with dust.

Environmental: Possible toxic fumes if incinerated.
Health: Not a hazard.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Ensure wastes are stored in an orderly manner that does not pose a safety risk. Segregate potentially hazardous substances such as asbestos.

Treatment / Disposal:
- Send to an approved landfill. Notify landfill before shipment if significant quantities.

Comments:
- Reuse materials when possible.
- Recycle plastics, rubber, wood, paper, metal, drywall where practical.
- Ontario requires that construction or demolition projects of more than one building or greater than 2000 square metres must implement a source separation program for brick and Portland cement concrete, corrugated cardboard, drywall, steel, and wood which is not treated, painted or laminated. Materials can be sent to a site operating under an Environmental Compliance Approval or to users of the material for recycling.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

TDG (includes loading / unloading): N/A

TDG Information

Placards: N/A
Comments: If the waste is contaminated with dangerous goods, TDG Regulations may apply.

Documentation

Transportation Documents: Truck Ticket or Waybill or Provincial Manifest as appropriate
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.

Construction and Demolition Material
Waste Information Sheet
September 2016
Containers - Aerosol Cans
Waste Information Sheet

General Information

Original Use: Spray cans for contact cleaners, lubricants, paints.
Physical State: Metal cans (usually <1 litre) under pressure.
Components: Various, dependent on original contents. Aerosol component may contain nitrous oxide, organic solvents, ketone, acetone or chlorofluorocarbons.

Potential Hazards

Class (WHMIS): Various  MSDS: Various
Hazard Symbols: Protective Equipment:

Environmental: Chlorofluorocarbons (CFCs) suspected of damage to ozone layer. Few aerosols still contain CFCs. Containers under pressure - can explode with incineration or compaction.
Health: Various health effects due to the fine mist and inhalation. Includes possible carcinogenesis and nervous system disorders.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Store in cool, well ventilated area.
Treatment / Disposal:
- Empty – Metal cans can be recycled through appropriate recycler
- Non-hazardous – Landfill (small quantity - verify with landfill operator)
- Hazardous – Hazardous Waste Disposal Facility (depending on original content)
Comments: If small quantity, take advantage of provincial toxic container collection programs which are available in Alberta, Manitoba and Ontario. Do not puncture or incinerate.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

TDG Information

Shipping Name: See TDG Comments Below
Class -  PIN -  Packing Group -  Special Provisions -

Placards: N/A
Comments: If available in a consumer commodity, then not regulated. Where TDG regulated, TDG classification subject to original supplier shipment's TDG classification. May also be TDG exempt by minimum quantity. When a container is emptied, but not cleaned or purged of dangerous goods, the words "Empty – Last Contained" must be written on the shipping document.

Documentation

Transportation Documents: Dependent on waste classification.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Containers - Crude Oil Sample Bottles
Waste Information Sheet

General Information

Original Use: Bottles from samples taken for on-site and off-site laboratory QA/QC analysis. Includes both glass and plastic bottles and residue samples.
Physical State: Solid containers with oil residues.
Components: In residue: hydrocarbons (oil and condensate), varsol, benzene, sulphur. May contain dissolved hydrogen sulphide.

Potential Hazards

Class (WHMIS): B2; B3; D2A
MSDS: Use MSDS of specific components.
Hazard Symbols: 
Protective Equipment: 

Environmental: Potential groundwater contamination from bottles wash liquids and leachate if stored in a landfill.
Health: Not an inhalation hazard if < 38°C. High vapor concentrations may irritate nose, throat and lungs. May irritate eyes and skin on contact. May contain H₂S.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Store empty containers in drums at field facility.
Treatment / Disposal:
- Send broken or damaged bottles to an approved landfill.
- Recycle glass if contaminated with less than 3% oil (visually clean, maybe small residue).

Comments:
Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A
- TDG (includes loading / unloading): N/A

TDG Information

<table>
<thead>
<tr>
<th>Shipping Name</th>
<th>Class</th>
<th>PIN</th>
<th>Packing Group</th>
<th>Special Provisions</th>
</tr>
</thead>
<tbody>
<tr>
<td>See TDG Comments Below</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

Placards: Dependent on waste classification.
Comments: If the container contains residues of dangerous goods, then the applicability of TDG requirements are dependent on the nature of the dangerous goods. If the container is empty but not cleaned, write “Residue – last contained” on the shipping document – in addition to Shipping Name, etc. Common waste classification includes Class 3, PETROLEUM CRUDE OIL, UN 1267.

Documentation

Transportation Documents: Dependent on waste classification.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Transport and storage of liquid products.
Physical State: Metal and plastic. Some are returnable. May be empty, rinsed or not rinsed.
Components: Used drums should be treated as hazardous (dangerous oilfield/waste dangerous good) and/or toxic until proven otherwise. Refer to drum labels and shipping information for contents (chemicals, lube oil, solvents, and alcohol).

Potential Hazards

Class (WHMIS): Dependent upon contents of original drum. MSDS: Dependent on contents of original drum. See drum label.
Hazard Symbols: Dependent on contents of original drum. See drum label. Protective Equipment: Dependent on contents of original drum. See drum label.

Environmental: Depends on original contents. Containers may have to be rinsed according to pre-treatment comments. Rinse liquid disposal is a concern if drum contents are hazardous.
Health: Dependent on contents of original drum. Regardless, wear protective clothing.

Management Methods

Waste Classification:

NWT: Non-Hazardous Waste
Alberta: Non-Hazardous Waste/Non-DOW
Manitoba: Non-Hazardous Waste
Saskatchewan: Non-Hazardous Waste
Ontario: Non-Hazardous Waste
Québec: Residual Material

NOTE: Above classification unless not completely empty and containing a hazardous waste. “Empty Container” is generally defined as a container that contains less than 2.5 cm of residue at the bottom of the container or less than 3% of the original contents, whichever is the lesser amount.

Storage: Store drums / barrels on their sides with all bungs securely in place at field facility. Use sorbents and / or provide leak containment. Do not give or sell to others. Do not store barrels which contain unknown materials – confirm material and use or properly dispose.

Treatment / Disposal:

• Return barrels / drums to original supplier.
• Triple rinse barrels / drums and send to scrap metal dealer / barrel reconditioner.
• Triple rinse and send to an approved landfill. (Contact Enbridge Environment Staff for appropriate rinsing material)

Comments: Purchase chemicals in bulk whenever possible to avoid the handling and disposal of barrels.

Reportable Release Quantity:

Placards: Dependent on waste classification.
Comments: If the container contains residues of dangerous goods, the shipping name, TDG classification, and waste classification is dependent on the nature of the dangerous goods. If the container is empty but not cleaned, write “Residue – last contained” on the shipping document – in addition to Shipping Name, etc.
The following exemption permits may apply to this waste: 95 2060 (in Alberta), SU 2801 (for Federal).

Documentation

Transportation Documents: Dependent on waste classification.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information? Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: For H₂S, propane, methane and nitrogen. Refers to nonfillable containers which cannot be purged.
Synonyms: Gas bomb containers.
Physical State: Solid
Components: Aluminum container

Potential Hazards

Class (WHMIS): Various - refer to container label or supplier information. MSDS: Various - refer to container label or supplier information.

Hazard Symbols:

Environmental: Explosion hazard. Minor air contaminant.
Health: Various health effects - dependent on gas.

Protective Equipment:

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Above classification assumes that containers cannot be purged.

Storage: Store in secure packaging/location away from heat sources.

Treatment / Disposal:
- Return to supplier if possible. Possible recycling to supplier but is dependent on type of cylinder.
- Hazardous – contact a hazardous waste contractor.

Comments: Verification on disposal method and transportation requirements should be obtained from provincial environment and transportation authorities. May possibly be landfilled.

Reportable Release Quantity:
- NWT: adverse effect
- Alberta: adverse effect
- Saskatchewan: adverse effect
- Manitoba: adverse effect
- Ontario: adverse effect
- Québec: adverse effect
- TDG (includes loading / unloading): adverse effect

Contact Enbridge Environment Staff in Edmonton.
### General Information

**Original Use:** Various containers from cleaners, lubricants, epoxies, glues, solvents, etc.

**Physical State:** Plastic, metal pails, buckets, tubs, tubes, cups, etc.

**Components:** Various

### Potential Hazards

<table>
<thead>
<tr>
<th>Class (WHMIS):</th>
<th>Various - refer to container label or supplier information.</th>
<th>MSDS:</th>
<th>Various - refer to container label or supplier information.</th>
</tr>
</thead>
</table>

**Environmental:** Possible groundwater and soil contamination from leaching of container’s product.

**Health:** Dependent on specific product. Refer to container label or supplier information.

### Management Methods

**Waste Classification:**
- NWT: Testing Required
- Alberta: Testing Required
- Saskatchewan: Testing Required
- Manitoba: Testing Required
- Ontario: Testing Required
- Québec: Testing Required

**Storage:** Store in an organized protected area away from heat sources. Prevent moisture from entering containers.

**Treatment / Disposal:**
- Hazardous - Hazardous Waste Disposal Facility
- Non-hazardous - Landfill via waste contractor
- Some jurisdictions restrict the recycle/reuse of metal drums.

**Comments:**
- In Alberta, containers are regulated under the Alberta Waste Control Regulation. If they contained a substance listed in Table 4B of the Alberta Users Guide for Waste Managers then the container must be triple rinsed.
- In Saskatchewan, Manitoba and the N.W.T., an empty container that contained dangerous goods is considered as hazardous waste unless it has been cleaned or purged.
- Within Ontario’s Regulation 347, there are exemptions for empty containers that previously contained a product; however, these exemptions are based on the product’s specific ingredients as identified on the MSDS. If the container is not exempt it shall be considered as hazardous waste.

**Reportable Release Quantity:**
- NWT: Any quantity if hazardous chemical
- Alberta: Any quantity if hazardous chemical
- Saskatchewan: Any quantity if hazardous chemical
- Manitoba: Any quantity if hazardous chemical
- Ontario: Any quantity if a hazardous chemical
- Québec: Any quantity if a hazardous chemical

Containers - Paint, Stain, Enamel
Waste Information Sheet

General Information

Original Use: Containers used to package paints as sent from the manufacturer.
Physical State: Metal and plastic cans and pails.
Components: Metal, plastic and paint (chemical) residues.

Potential Hazards

Class (WHMIS): Specific to container - see container info.  MSDS: Specific to container - see container info.
Hazard Symbols: Protective Equipment:

Environmental: Potential toxic leachate from the storage or landfill of the containers if not drained and dried. Refer to “Storing a Waste”, Section 4.0 of ENBRIDGE Waste Management Plan.
Health: Liquids may be irritant to eyes and skin.

Management Methods

Storage: Do not allow rain water to enter containers.

Treatment / Disposal: Thoroughly drain (use) and dry all containers before storage or landfill.

Reportable Release Quantity: NWT: N/A  Alberta: N/A  Saskatchewan: N/A  Manitoba: N/A  Ontario: N/A  Québec: N/A  TDG (includes loading / unloading): N/A

Placards: N/A
Comments: Assumed not controlled by TDG if the paint residue is dry and therefore flash point is > 60°C. If the waste is contaminated with dangerous goods, TDG Regulations may apply.

Documentation

Transportation Documents: Truck Ticket or Waybill or Provincial Manifest as appropriate
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
**General Information**

| Original Use: | In the petroleum industry, herbicide/pesticide containers usually originate from the application of herbicides for weed control. Herbicides/pesticide containers are hazardous, whether empty or full. |
| Physical State: | Metal and plastic cans and pails. |
| Components: | 2,4-D, Glyphosate, Bromacil, Picloram, Atrazine, other fungicides and insecticides. |

**Potential Hazards**

**Class (WHMIS):** B4; D1B; D2A  
**MSDS:** Specific to type of pesticide. See container or supplier's information.

**Hazard Symbols:**  
**Protective Equipment:**

**Environmental:** Container effluent may cause severe environmental damage (surface and groundwater contamination, vegetation damage, and subsequent soil erosion). Some pesticides may remain active in waterbody sediments for extended periods.

**Health:** Various effects. Inhalation of some herbicides/pesticides can cause death. Herbicides/pesticides can be absorbed through the eyes and skin.

**Management Methods**

**Waste Classification:**  
NWT: Hazardous Waste  
Alberta: Hazardous Waste/DOW  
Saskatchewan: Waste Dangerous Good  
Ontario: Hazardous Waste  
Québec: Residual Hazardous Material

**Storage:** Do not allow rainwater to enter empty containers. Avoid the long-term storage of empty containers.

**Treatment / Disposal:**  
- Triple rinse containers with rinsate going back into spray tank.  
- Send to designated pesticide container collection facility (contact Enbridge Environment Staff for assistance).

**Comments:** Use certified contractors for herbicide/pesticide applications for all chemical vegetation control, and ensure they properly dispose of all containers and associated wastes to designated facilities.

**Reportable Release Quantity:**  
NWT: Any quantity (free liquids)  
Alberta: Any quantity (free liquids)  
Saskatchewan: Any quantity (free liquids)  
Manitoba: Any quantity (free liquids)  
Ontario: Any quantity (free liquids)  
Québec: Any quantity (free liquids)

**Placards:** Dependent on specific pesticide.
**Comments:** There are a large number of TDGR categories for herbicides/pesticides. Consult the supplier and TDGR for Specific TDG classification. If the container is empty, write "Residue – last contained" on the shipping document.

**Documentation**

**Transportation Documents:** TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?  
Contact Enbridge Environment Staff in Edmonton.
**Contaminated Debris and Soil - Chemical / Solvent**

**Waste Information Sheet**

---

### General Information

**Original Use:** Generated by the accidental spillage of chemicals and solvents during operation or maintenance. Includes contaminated soils, vegetation and absorbent materials.

**Physical State:** Solid, semi-liquid (chemical, solvent and contaminated solids).

**Components:** Various chemicals, hydrocarbons (solvents), soil, water, sorbent and other spill debris.

### Potential Hazards

**Class (WHMIS):** B4

**MSDS:** Use MSDS of specific components, (e.g. solvent).

**Hazard Symbols:** Refer to container label or supplier MSDS.

**Protective Equipment:**

- **Environmental:** Potential extensive groundwater / surface water and soil contamination if contaminated debris / soil is left in place or directly on ground surface or if disposed in a landfill.

- **Health:** Dependent on specific product / chemical. Typically not an inhalation hazard if < 38°C. High vapor concentration may irritate nose, throat and lungs. May irritate eyes and skin on contact.

### Management Methods

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

**Storage:**
Contain material in sealed drums, or lined and bermed area, away from heat and ignition sources at field facility.

**Treatment / Disposal:**
- On-site / off-site land treatment / biodegradation.
- Send to an appropriate (approved) waste management facility.
- On-site / off site treatment through chemical application and treatment (e.g. lime application for acid effected soils).
- Possibly send to a waste contractor for solvent / chemical recovery.

**Comments:** Contact Enbridge Environment Staff on a case specific basis. Testing may be required.

**Reportable Release Quantity:**
- NWT: 25 kg or litres
- Alberta: 25 kg or litres
- Saskatchewan: 25 kg or litres
- Manitoba: 1 kg or litres
- Ontario: Any quantity
- Québec: Any quantity

**TDG (includes loading / unloading):** Depending on specific contaminant.

Contaminated Debris and Soil - Mercury
Waste Information Sheet

General Information

Original Use: Generated from the spillage of mercury from instrument manometers.
Physical State: Solid (mercury contaminated soils).
Components: Mercury, soil, water, sorbent and other spill debris.

Potential Hazards

Class (WHMIS): D1A; D2A
MSDS: Mercury
Hazard Symbols:
Protective Equipment:

Environmental: Spilled mercury will contaminate pond and drainage ditch sludge and can accumulate in drains/gutters within process buildings. Leachate may contain soluble mercury salts.
Health: Toxic vapors. Eye irritation. If absorbed by skin, may cause dermatitis. Long or repeated exposure may create emotional disorder and damage to the nervous system, kidneys or liver.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Storage:
- • If large quantity of mercury is spilled, the metal may be collected and cleaned for reuse.
- • On-site solidification, Hazardous Waste Disposal Facility if mercury levels are above regulated landfill regulations.

Comments: Contact Enbridge Environment Staff on a case specific basis. Testing may be required.
Reportable Release Quantity:
- NWT: 5 kg or litres
- Alberta: 5 kg or litres
- Saskatchewan: 100 g
- Manitoba: 5 kg or litres
- Ontario: Any quantity
- Québec: Any quantity
- TDG (includes loading / unloading): 5 kg or L

</tbody>
</table>

Placards: Class 8
Comments: After shipping name put: “(soil/debris contaminated with mercury)”. TDG regulation is dependent on whether or not contaminant levels are above regulated landfill regulation. Testing may be required.
For sufficient quantities of mercury, see “Mercury” Waste Information Sheet.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
## General Information

**Original Use:** Generated by the accidental spillage of crude oil or condensate. Includes contaminated soils, vegetation, and absorbent materials.

**Physical State:** Solid (oil / condensate and contaminated solids).

**Components:** Oil, condensate, BTEX, heavy metals (As, Cd, Cr, Pb, Hg, Ni, Ti or Se), salts, soils, boron, barium, other spill debris and absorbent materials.

## Potential Hazards

**Class (WHMIS):** B4

**MSDS:** Crude Oil.

**Hazard Symbols:**

<table>
<thead>
<tr>
<th>Environmental</th>
<th>Health</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potential groundwater contamination from hydrocarbons if disposed in landfill. Migration of hydrocarbons also possible with land treatment. Light ends may be extremely mobile (water soluble).</td>
<td>Typically not an inhalation hazard if &lt; 38°C. High vapor concentrations may irritate nose, throat, and lungs. May irritate eyes and skin on contact. Personnel protection required. Level of protection will vary with the waste.</td>
</tr>
</tbody>
</table>

**Protective Equipment:**

- **Environmental:** Goggles, mask, splash suit, rubber boots, spill kit.
- **Health:** Respirator, protective eyewear, gloves, protective clothing.

## Management Methods

### Waste Classification:

- **NWT:** Non-Hazardous Waste
- **Alberta:** Non-Hazardous Waste/Non-DOW
- **Saskatchewan:** Non-Hazardous Waste
- **Manitoba:** Non-Hazardous Waste
- **Ontario:** Non-Hazardous Waste
- **Québec:** Residual Material

**Note:** Classified as Hazardous Waste/WDG/DOW if BTEX, flash point and hydrocarbon exceed criteria.

### Storage:

If saturated - store in steel drums. Temporary storage on drying pads or lined areas.

### Treatment / Disposal:

Recover free liquids, contain contaminated soil within a bermed and lined storage cell, contact Enbridge Environment Staff for treatment and disposal options.

### Comments:

Minimize contamination potential through the use of spill containment measures such as dikes and drip pans. Various jurisdictions have specific rules around the management of hydrocarbon contaminated materials. Contact the Enbridge Environment Staff to provide assistance.

### Reportable Release Quantity:

- **NWT:** 25 kg
- **Alberta:** 25 kg
- **Saskatchewan:** Any quantity
- **Manitoba:** 1 kg
- **Ontario:** Any quantity
- **Québec:** Any quantity

**TDG (includes loading / unloading):** 25 kg or litres

</tr>
</tbody>
</table>

**Placards:** Class 4.1 (in bulk or over 500 kg).

**Comments:** May not be TDG regulated. Classified as Hazardous Waste/WDG/DOW if BTEX, flash point and hydrocarbon exceed regulated criteria.

## Documentation

**Transportation Documents:** TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Generated by the accidental spillage or over use of pesticides (i.e. herbicides) during weed control operations. Includes sterilized contaminated soils and affected vegetation.

Physical State: Solid (pesticide and contaminated solids).

Components: Various pesticides (bromacil, diuron, sodium metaborate, ureabor, tebuthiron, picloram, atrazine, dicamba, 2,4-D), soils, absorbents, and other spill debris.

Potential Hazards

Class (WHMIS): B4; D1B; D2A

Hazard Symbols: Protective Equipment:

Environmental: Potential groundwater and surface water contamination. Wind drift to agricultural or non-contaminated areas. Surface water contamination from soil leaching.

Health: Avoid inhalation - can cause nervous system disorders. Eye irritation. Can be readily absorbed through the skin and cause severe irritations.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Dangerous Oilfield Waste
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Storage: Store debris in steel drums at field facility. Temporary storage on drying pads or lined areas. Keep containers closed and in a cool, well ventilated area.

Treatment / Disposal:
- If possible treat contaminated soil on-site through the application of activated carbon / charcoal (contact Enbridge Environment Staff).
- Spread affected soils over areas of site requiring vegetation control.
- Send to an approved landfill – co-disposal with activated carbon / charcoal. Notify landfill before shipment.

Comments: Contact Enbridge Environment Staff on a case specific basis.

Reportable Release Quantity:
- NWT: 5 kg or litres
- Alberta: 5 kg or litres
- Saskatchewan: 5 kg or litres
- Manitoba: 5 kg or litres
- Ontario: Any quantity
- Québec: Any quantity

TDG Information

Shipping Name: SOLIDS CONTAINING TOXIC LIQUID, N.O.S (Soil / debris contaminated with "Specific Chemical Name")

Class: 6.1

PIN: UN 3243

Packing Group: II

Special Provisions: 16, 57

Placards: Class 6.1 (in bulk or over 500 kg).

Comments: Many pesticides are not classified as poisonous substances in TDG. Check classification of the original product.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or District office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Contaminated Debris and Soil - Produced Water
Waste Information Sheet

General Information

Original Use: Generated by the accidental spillage of emulsion and produced water. Includes contaminated soils, vegetation, and absorbent materials.

Physical State: Solid and liquid (salt water and contaminated solids).

Components: Aromatic hydrocarbons, oil and grease, water, sand, sodium, calcium, magnesium and potassium. Many types of salt may be in waste. Most common is sodium chloride (NaCl) – average 2.6%.

Potential Hazards

Class (WHMIS): B4; D2A

MSDS: Use MSDS of specific components.

Hazard Symbols:

Environmental: Produced water with a high salt content will damage vegetation; extremely persistent compound which is toxic to environment in high concentrations.

Health: Not an inhalation hazard < 38°C. High vapor concentrations may irritate nose, throat and lungs. May irritate eyes and skin on contact. May contain H₂S.

Management Methods

Waste Classification:

- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Manitoba: Non-Hazardous Waste
- Saskatchewan: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: If saturated - store in steel drums. Temporary storage on drying pads or lined areas.

Treatment / Disposal:

- Recover free liquids, contain contaminated soil within a bermed and lined storage cell, contact Enbridge Environment Staff for treatment and disposal options
- Small to medium volumes of contaminated soil should be sent to an approved landfill.

Comments: Contact Enbridge Environment Staff on a case specific basis.

Reportable Release Quantity:

- NWT: 25 kg
- Alberta: 2 m³ (any amount off-site)
- Saskatchewan: 1.6 m³ (any amount off-site)
- Manitoba: 1 kg
- Québec: Any quantity
- Ontario: Any quantity

Placards: Dependent on specific contaminant.

Comments: Classifications for this waste may vary depending on the specific contaminant. If waste contains significant quantities of petroleum crude oil, waste could be classed as SOLIDS CONTAINING FLAMMABLE LIQUIDS, N.O.S. (“Technical Name of Contaminant”). Refer to Contaminated Debris and Soil – Oil/Condensate Waste Information Sheet.

Documentation

Transportation Documents: Dependent on specific contaminant.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Contaminated Debris & Soil - Refined Products

Waste Information Sheet

General Information

Original Use: This waste is generated by the accidental spillage of refined products. Includes contaminated soils, vegetation and absorbent materials.

Physical State: Solid (liquid and contaminated solids).

Components: Refined products, heavy metals (As, Cd, Cr, Pb, Hg, Ni, Ti or Se) soils, boron, barium, other spill debris and absorbent materials.

Potential Hazards

Class (WHMIS): B4

MSDS: All refined products.

Hazard Symbols: 

Environmental: Potential groundwater contamination from hydrocarbons if disposed in landfill.

Health: Migration of hydrocarbons also possible with land treatment. Not an inhalation hazard below 38°C. High vapor concentrations may irritate nose, throat and lungs. May irritate eyes and skin on contact.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Storage: Store in steel vessels, drums, etc. Temporary storage on drying pads or in/on lined pits or ground.

Treatment / Disposal:
- Recover free liquids, contain contaminated soil within a bermed and lined storage cell, contact Enbridge Environment Staff for treatment and disposal options
- Non-hazardous, Landfill, Bioremediation

Comments: Minimize contamination potential through the use of spill containment measures such as dikes and drip pans. Various jurisdictions have specific rules around the management of hydrocarbon contaminated materials. Contact the Enbridge Environment Staff to provide assistance.

Reportable Release Quantity:
- NWT: 25 kg
- Alberta: 25 kg
- Saskatchewan: 1.6 m³ (any amount off-site)
- Manitoba: 1 kg
- Ontario: Any quantity
- Québec: Any quantity
- TDG (includes loading / unloading): 25 kg or litres

Contaminated Groundwater, Sludges/Slurries
Waste Information Sheet

General Information

Original Use: This waste is generated by the removal of groundwater and/or material classified as a sludge/slurry (i.e., a loose combination of soil and water).

Physical State: Liquid or semi-solid.

Components: Road salt, pesticides and herbicides, accidental spills of hazardous and non-hazardous materials.

Potential Hazards

Contaminated Groundwater, Sludges/Slurries
Waste Information Sheet
September 2016
# General Information

**Original Use:** This material is injected into the pipeline system to reduce friction and viscosity elements to improve the overall “flowability” of pipeline liquids.

**Physical State:** Opaque amber to light green liquid, hydrocarbon/solvent-like odour.

**Components:** Various petroleum hydrocarbons (> 90%).

---

# Potential Hazards

**Class (WHMIS):** B3, D2B

**MSDS:** Use MSDS for specific product (e.g. CDR Flow Improver from Conoco Inc., Houston, TX, USA).

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:** A highly mobile waste stream. Potential for groundwater and soil contamination. Possible toxic vapours and fire hazard with on-site recycling operations.

**Health:** May cause minor skin, eye and lung irritation. Toxic if ingested.

---

# Management Methods

**Waste Classification:**

- **NWT:** Hazardous Waste
- **Alberta:** Hazardous Waste/DOW
- **Saskatchewan:** Waste Dangerous Good
- **Manitoba:** Hazardous Waste
- **Ontario:** Hazardous Waste
- **Québec:** Residual Hazardous Material

**Storage:** Store in steel drums or tanks in a well ventilated area away from heat sources.

**Treatment / Disposal:** Return to supplier or solvent recycler for recycling.

**Comments:** May need to test to determine actual classification due to variety of products.

**Reportable Release Quantity:**

- **NWT:** 100 litres
- **Alberta:** 200 kg or litres
- **Saskatchewan:** 500 litres (100 off-site)
- **Manitoba:** 100 litres
- **Québec:** Any quantity

**TDG Information**

<table>

</tr>
</tbody>
</table>

**Placards:** Class 3 (in bulk or over 500 kg)

**Comments:** The above classification is based on a pure product. If the waste is contaminated with other materials, OTHER TDG Shipping Names MAY APPLY.

---

# Documentation

**Transportation Documents:** TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information? Contact Enbridge Environment Staff in Edmonton.
# Drag Reducing Agent (DRA) – Liquid Power or EP-1000 Extreme Power

## Waste Information Sheet

### General Information

**Original Use:**
This material is injected into the pipeline system to reduce friction and viscosity elements to improve the overall “flowability” of pipeline liquids.

**Physical State:**
White liquid with a mild odour.

**Components:**
- Water and calcium (CDR Liquid Power), Ethylene glycol, alcohols, C12-14-secondary, ethoxylated (EP-1000 Extreme Power) and other unknown constituents (protected by product patent) (both).

### Potential Hazards

**Class (WHMIS):** N/A

**MSDS:** Use MSDS for specific product (i.e. CDR Liquid Power from Conoco Inc. and Extreme Power EP 1000 from Phillips Specialty Products Inc., both in Houston, TX, USA).

**Hazard Symbols:** N/A

**Protective Equipment:**

**Environmental:**
No significant impacts. Mild caustic - may cause localized pH alteration in soils or surface waters.

**Health:**
May cause minor skin, eye and lung irritation.

### Management Methods

**Waste Classification:**
- **NWT:** Non-Hazardous Waste
- **Alberta:** Non-Hazardous Waste/Non-DOW
- **Saskatchewan:** Non-Hazardous Waste

**Storage:**
Store in steel drums or tanks in a well ventilated area. Segregate from strong oxidizing agents.

**Treatment / Disposal:**
- Return to supplier (if “un-spent”).
- Send to an appropriate (approved) waste management facility

**Comments:**

**Reportable Release Quantity:**
- **NWT:** Any vol. causing an adverse impact
- **Alberta:** Any vol. causing an adverse impact
- **Saskatchewan:** Any vol. causing an adverse impact
- **Manitoba:** Any vol. causing an adverse impact
- **Ontario:** Any quantity
- **Québec:** Any quantity
- **TDG (includes loading / unloading):** N/A

### TDG Information

**Comments:**
If the waste is contaminated with dangerous goods, TDG Regulations may apply.

### Documentation

**Transportation Documents:**
Truck Ticket or Waybill or Provincial Manifest as appropriate

**Company Records:**
Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Includes broken and obsolete computer desktop, laptop and notebook computer terminals, keyboards, mousse, disk drives, monitors and printers from offices.

Physical State: Solid

Components: Plastic casings containing various components including heavy metals, such as lead, cadmium and mercury, and valuable materials such as aluminum, ferrous metals and copper.

Potential Hazards

Class (WHMIS): Not a controlled product.

Hazard Symbols: Not Applicable.

Environmental: Illegal burning may produce toxic fumes. Decomposition in landfills may cause leaching of toxins into the soil and groundwater.

Health: Not expected to be a hazard unless casing is forcibly broken or damaged to expose potentially hazardous components.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Store in bins or in areas of low traffic volumes on-site. Segregate computer monitors from other waste computer equipment to facilitate recycling. Maintain waste volumes in a neat and orderly manner. Protect from high heat and moisture.

Treatment / Disposal:
- If available, use provincial, municipal, supplier, or retailer waste electrical and electronic equipment (WEEE) stewardship (take-back and recycling) programs.
- Landfill – verify with provincial environmental agency or landfill operator.

Comments:

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

TDG Information

Shipping Name: Not TDG Regulated

Class: N/A

PIN: N/A

Packing Group: N/A

Special Provisions: N/A

Placards: N/A

Comments: If the waste is contaminated with dangerous goods, TDG Regulations may apply.

Documentation

Transportation Documents: Truck Ticket or Waybill or Provincial Manifest as appropriate

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Includes empty ink and toner cartridges from office computer equipment and printers.
Physical State: Solid
Components: Small quantities of various chemicals, depending on the cartridge manufacturer (Propanol, ethanol, iron oxide).

Potential Hazards

Class (WHMIS): Not a controlled product.
MSDS: Use MSDS of specific cartridge.

Hazard Symbols:
Environmental: Illegal burning may produce toxic fumes. Decomposition in landfills may cause leaching of toxins into the soil and groundwater.
Health: Encased in a cartridge and are not accessible unless forcibly broken or damaged. Not expected to be a health risk under normal circumstances. Exposure to the chemical components of damaged or broken cartridges may cause eye irritation.

Management Methods

Waste Classification:
NWT: Non-Hazardous Waste
Alberta: Non-Hazardous Waste/Non-DOW
Saskatchewan: Non-Hazardous Waste
Manitoba: Non-Hazardous Waste
Ontario: Non-Hazardous Waste
Québec: Residual Material

Storage:
Store in bins or in areas of low traffic volumes on-site. Segregate from other waste to facilitate recycling.
Maintain waste volumes in a neat and orderly manner. Protect from high heat and moisture.

Treatment / Disposal:
• If available, use provincial, municipal, supplier, or retailer stewardship programs. Some manufacturers can rebuild toner cartridges with new drums; refilled ink-jet cartridges or self-refill kits can also be purchased.
• BE CAREFUL when using refilled cartridges or self-refill kits; may not be compatible with printer.
• Where opportunities for the 4R's are unavailable, landfill, unless the chemical content warrants management as hazardous waste. Check the MSDS.

Filters - Glycol
Waste Information Sheet

General Information

Original Use: Facilities where glycol is used as a heat trace. Filters used for the removal of corrosion products, and other impurities from glycol when recycled or regenerated in a closed system.

Physical State: Cartridge or paper filters.

Components: May contain triethylene glycol (TEG), diethylene glycol (DEG), ethylene glycol (EG), propylene glycol (PG) hydrocarbons, boron, chromium, copper, nickel, lead zinc, iron sulphide and carbon.

Potential Hazards

Class (WHMIS): D2A

Hazard Symbols: 

Environmental: Potential groundwater contamination if disposed in a landfill. Wash water may contain high levels of glycol. Incineration may produce toxic fumes.

Health: Not an inhalation hazard if < 38°C. High vapor concentration may irritate nose. Avoid prolonged exposure.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Note: Above classification if contaminated – see TDG Comments below.

Storage:
- Store temporarily in drain barrels to allow for the drainage of any free liquids. Transfer to designated filter bin / bag (glycol filters used in sour service may be pyrophoric; store in sealed steel drums). Keep in well ventilated storage area.

Treatment / Disposal:
- Scheduled pick up by waste contractor for treatment at recycling/recovery facility.
- Treated filters are then landfilled (depending on application) as nonhazardous materials.
- Recycle drained liquids or send to an appropriate (approved) waste management facility.

Comments:
- Use filters with removable cores to reduce waste volumes.
- Pyrophoric filters cannot be stored in bins or tote bags.

Reportable Release Quantity:
- NWT: 25 kg or litres
- Alberta: 25 kg or litres
- Saskatchewan: 25 kg or litres
- Manitoba: 1 kg or litre
- Ontario: Any quantity
- Québec: Any quantity

</tr>
</tbody>
</table>

Placards: Class 4.2 as appropriate (in bulk or over 500 kg).

Comments: EG, PG, DEG and TEG filters are not TDG regulated. However, after use in gas dehydration processes, glycol filters may be pyrophoric, flammable, or leachable as indicated by TDG classifications above. Pyrophoric solids (Class 4.2) are prohibited for bulk transport.

**ERAP** Cannot offer for transport dangerous goods having PIN UN2846 when the quantity of that good exceeds 1,000 kg or litres for the dangerous goods without an Emergency Response Assistance Plan approved by Transport Canada. Verify with the Enbridge Environment Staff.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Contact Enbridge Environment Staff in Edmonton.

Filters – Glycol
Waste Information Sheet
September 2016
General Information

Original Use: Filters from engines, rotating equipment and lubricating oil clean-up systems. Used for the removal of corrosion products, degradation sludges and other impurities.

Physical State: Cloth or paper cartridges of various sizes, metal cartridges.

Components: Hydrocarbons, lead, zinc, additives, and other trace heavy metals, N-hexane, naptha. May also contain triphenyl phosphates, anti-rust and anti-oxidant additives. Fibre, water, ash, sand.

Potential Hazards

Class (WHMIS): D2B

MSDS: Lubricating Oil

Hazard Symbols: Potential groundwater contamination (metals leaching) if disposed in a landfill. Heavy metals may release under acidic conditions. Hydrocarbons are toxic in soil and water. Incineration may produce toxic fumes. Not an inhalation hazard if < 38°C. High vapor concentrations may irritate nose and throat. Slight skin irritations.

Protective Equipment:

Environmental: Potential groundwater contamination (metals leaching) if disposed in a landfill. Heavy metals may release under acidic conditions. Hydrocarbons are toxic in soil and water. Incineration may produce toxic fumes. Not an inhalation hazard if < 38°C. High vapor concentrations may irritate nose and throat. Slight skin irritations.

Management Methods

Waste Classification:

NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Manitoba: Hazardous Waste
Ontario: Hazardous Waste
Québec: Residual Hazardous Material

Note: Alberta – Waste Type 201 – spent / undrained lube oil filters from internal combustion engines. Testing may be required for classification. Dependent on application.

Storage: Store temporarily in drain barrels to allow for the drainage of any free liquids. Transfer to designated filter bin / bag. Keep in well ventilated storage area.

Treatment / Disposal:

- Scheduled pick up by waste contractor for recycling/recovery of used oil.
- Drained liquids should be recycled.

Comments: Install reusable filter systems on compressors.

Reportable Release Quantity:

NWT: 25 kg
Alberta: 25 kg or litres
Saskatchewan: 100 kg (50 kg off-site)
Manitoba: 1 kg
Ontario: Any quantity
Québec: Any quantity
TDG (includes loading / unloading): 25 kg or litres

TDG Information

Shipping Name | Class | PIN | Packing Group | Special Provisions
--- | --- | --- | --- | ---
See TDG Comments below | - | - | - | -

Placards: Lubricating oil filters are not TDG regulated. If there is any indication that the lube oil may have any contaminants, then further TDG testing may be required for flammability and leachates. Other possible classes are Flammable Solids N.O.S. (lube oil filters); Class 4.1, UN 3175, PG II.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

**Fuel - Diesel**

**Waste Information Sheet**

### General Information

**Original Use:** Vehicle fuel.

**Physical State:** Flammable liquid.

**Components:** Mixture of hydrocarbons. May contain benzene, naphthalene, sulphur.

### Potential Hazards

**Class (WHMIS):** B3, D2B

**MSDS:** Low Sulphur Diesel

**Hazard Symbols:**

**Environmental:** Possible groundwater or surface water contamination if spilled or leaked. Can be toxic to aquatic life.

**Health:** Causes severe skin irritation. Aspiration hazard if swallowed. Use with adequate ventilation. Avoid contact or inhalation of fumes.

### Management Methods

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste (221-I)
- Québec: Residual Hazardous Material

**Storage:**
Store in tightly closed approved containers at a field facility. Keep closed. Store in a cool, dry, well-ventilated place away from heat, direct sunlight, and all sources of ignition.

**Treatment / Disposal:** Hazardous Waste Management Facility

**Reportable Release Quantity:**
- NWT: 100 litres

- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage:
- Store in bins or in areas of low traffic volumes on-site. Segregate waste types to facilitate recycling.
- Maintain waste volumes in a neat and orderly manner. Protect from wind.

Treatment / Disposal:
- Send / transfer to an approved landfill.
- Segregate and recycle paper, cardboard, glass, metal, and plastic.

Comments: Ontario requires that office buildings greater than 10,000 square metres have a source separation program.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A
- TDG (includes loading / unloading): N/A

Garbage - Domestic Waste
Waste Information Sheet
September 2016
General Information

Physical State: Liquid usually mixed 1:1 with water (depending on particular use). Synonyms: Ethylene glycol, antifreeze, monoethylene glycol or glycol alcohol.

Components: Glycol, iron oxide (trace), iron sulphide, heavy metals. May contain some additives (corrosion inhibitors) for antifreeze.

Potential Hazards

Class (WHMIS): D2A  
MSDS: Use MSDS of specific components (e.g. TEG, DEG, EG, Antifreeze, Ethylene Glycol).

Hazard Symbols:  
Protective Equipment:  

Environmental: Storage in unlined pits or general spills can cause surface and groundwater contamination. Fatal to wildlife.

Health: Inhalation of fumes may cause throat irritation and headaches. Toxic when ingested; could result in kidney damage. Moderate irritation to skin, eyes and mucous tissues upon contact.

Management Methods

Waste Classification: NWT: Hazardous Waste  
Alberta: Hazardous Waste/DOW  
Saskatchewan: Waste Dangerous Good  
Manitoba: Hazardous Waste  
Ontario: Hazardous Waste (212-L)  
Québec: Residual Hazardous Material  

Note: See comment under TDG information.

Storage: Store material in steel drums at field facility. Store in a cool well ventilated place.

Treatment / Disposal:
- Send to glycol supplier for recycling.
- Glycol from tank roof drain lines should be contained for use the following year.
- Vehicle antifreeze should be changed and recycled by a qualified service centre.
- Filter and reuse in process (may require the addition of corrosion inhibitor).
- In Alberta, if glycol content < 40%, waste may be injected via Class Ia or Ib injection well.

Reportable Release Quantity: NWT: 100 litres  
Alberta: 200 kg or litres  
Saskatchewan: 25 litres (5 litres off-site)  
Manitoba: 100 litres  
Ontario: Any quantity  
Québec: Any quantity  
TDG (includes loading / unloading): 200 kg or L

</tbody>
</table>

Placards: Class 3 (in bulk or over 500 kg).

Comments: There are various TDG categories for glycol wastes. The above is one example. OTHER TDG Shipping Names MAY APPLY. Dependent on specific waste chemical. If flash point ≤ 60°C then it will be TDG regulated. Due to processes, transformations and mixtures, this waste may contain dangerous goods and should be tested - if not pure waste glycol. The additives in antifreeze may make this waste TDG regulated as above. Not regulated if not contaminated with a dangerous good.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate; dependent if glycol is contaminated with a dangerous good.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information? Contact Enbridge Environment Staff in Edmonton.
**General Information**

**Original Use:** Sensing tape used for the detection of H$_2$S leaks.

**Physical State:** White tape strips.

**Components:** Lead acetate and acetic acid.

**Potential Hazards**

**Class (WHMIS):** The “tape” itself is not a controlled product.

**MSDS:** Lead acetate, acetic acid.

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:** Toxic leachate, soil and groundwater contamination from lead acetate if improperly landfilled. Co-dispose with limestone.

**Health:** Not expected to be hazard however avoid prolonged skin contact. Handle with gloves. Wash thoroughly after handling.

**Management Methods**

**Waste Classification:**

- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

**Storage:** Seal inside plastic bags and keep in closed containers, in covered location away from flammable locations.

**Treatment / Disposal:** Hazardous – Hazardous Waste Disposal Facility. Landfill which accepts hazardous waste.

**Reportable Release Quantity:**

- NWT: 5 kg or liters
- Alberta: 5 kg or liters
- Saskatchewan: 5 kg or litres
- Manitoba: 5 kg or litres

*H$_2$S Sensing Tape*

Waste Information Sheet

*September 2016*

Enbridge Pipelines (NW) Inc.
Little Smith Creek Maintenance Project (KP 158)

Application to the SLWB - Land Use Permit and Water License
Appendix 6 - Waste Management Plan (Revised)
Filed September 10, 2020

Page 64 of 92
**General Information**

**Original Use:** Pressurized for use in refrigeration and fire extinguishing systems. Federal government has imposed strict control on non-essential uses and the discharge testing of fire extinguishing system.

**Physical State:** Dense colorless gas with slight ethereal odor. May occur as a liquid under extreme pressure.

**Components:** Bromotrifluoromethane (Brominated fluorocarbon). Trade names examples are Halon 1301, Fluorocarbon 1301, Trifluorobromomethane, Freon 13B1, R13B1.

**Potential Hazards**

**Class (WHMIS):** A

**MSDS:** Halon 1301

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:** Linked to depletion of ozone layer in upper atmosphere.

**Health:** Very low toxicity, weak narcotic. Eye irritant. May cause frost bite and skin burns. High concentrations may cause Asphyxiatiion without warning.

**Management Methods**

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Ontario: Hazardous Waste (331-R)
- Manitoba: Hazardous Waste
- Québec: Residual Hazardous Material

**Storage:** Closed pressurized systems only. Store cylinders in an upright position in a dry well-ventilated area.

**Treatment / Disposal:** Contact appropriate (approved) supplier, recycler and/or Enbridge Environment Staff for assistance.

**Comments:** Contact supplier for disposal of any halon wastes - high potential for supplier to re-use and recycle. Halon systems that are no longer required should have the halon storage units removed by supplier. If a halon system is to be tested, send to a testing company that uses an environmentally acceptable testing procedure. Ensure that the company empties the halon into another tank before hydrostatically testing the cylinder and then re-injects the gas once the test is complete. Do not empty halon cylinders or extinguishers before sending the cylinder for structural testing.

**Reportable Release Quantity:**

Hydrotest Fluids - Methanol
Waste Information Sheet

General Information

Original Use: Methanol is used as a hydrotest fluid for pipelines and for dehydration in gas processing. Also used for hydrate removal.

Physical State: Low viscosity clear liquid, alcohol-like odor.

Components: Methanol.

Potential Hazards

Class (WHMIS): B2, D1B, D2A, D2B.

MSDS: Use MSDS of specific components (e.g.; Methanol, Methyl Hydrate).

Hazard Symbols:

Protective Equipment:

Environmental: Potential groundwater contamination if spilled. Very toxic to aquatic life.

Health: Vapors may irritate nose, throat, lungs, and cause eye irritation. Methanol is readily absorbed by the skin and may produce nervous system effects.

Management Methods

Waste Classification: NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Ontario: Hazardous Waste
Québec: Residual Hazardous Material

Storage: Store in steel drums or tanks at field facility. Keep in a well ventilated area away from heat sources.

Treatment / Disposal:
- Reuse fluids for subsequent hydro-testing operations.
- Send to waste contractor for recovery of product or incineration.
- Deep well disposal well.

Comments: If large hydrostatic test requires methanol, consideration should be given to renting methanol water mixture from supplier and returning mixture to supplier when test is completed.

Reportable Release Quantity:
NWT: 100 litres
Alberta: 200 kg or litres
Saskatchewan: 500 litres (100 off-site)
Manitoba: 100 litres
Ontario: Any quantity
Québec: Any quantity
TDG (includes loading / unloading): 200 kg or L

</tbody>
</table>

Placards: Class 3 (in bulk or over 500 kg).

Comments: First TDGR classification for pure methanol. If contaminated with inert substances or a mixture of two or more dangerous goods, then the second shipping name may apply.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Hydrotest Fluids - Water
Waste Information Sheet

General Information

Original Use: Surface water or municipal source water used as a hydrotest fluid for pipelines.

Physical State: Condition of source water. Impurities from testing may discolour water.

Components: Possible components include iron, nickel, lead, suspended solids and oil.

Potential Hazards

Class (WHMIS): Not a controlled product.

Hazard Symbols: Protective Equipment:

Environmental: Potential erosion and surface water sedimentation when released following hydrotest operation.

Health: No significant health issues.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Surface storage in pits and depressions must be in accordance with construction permit and municipal authority. Consultation may also be required with the provincial environment authority.

Treatment / Disposal:
- Reuse fluids for subsequent hydro-testing operations.
- Surface land release following testing and approval from municipality, provincial environment authority or NEB (See comments below).
- Deep well disposal.

Comments: Hydrotest water must always be analyzed prior to watershed release. Must not raise or lower receiving body of water by ±2°C. If saline water was used, do not discharge onto arable land. Tank water should also be analyzed prior to release onto tank farm area. Provincial environment department approval is required for water use and / or disposal. A significant advance notification time may be required. Refer to ENBRIDGE procedures. While used hydrostatic test water is not usually a hazardous waste, water may require pre-treatment prior to release – if water becomes contaminated during testing (from sediments and pipeline impurities). Possible treatment methods include filtering and activated carbon treatment.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A

TDG Information

Shipping Name: Not TDG Regulated

Class: N/A

PIN: N/A

Packing Group: N/A

Special Provisions: N/A

Placards: N/A

Comments: If the waste is contaminated with dangerous goods, TDG Regulations may apply. Secure all valves and fittings prior to transport.

Documentation

Transportation Documents: Truck Ticket or Waybill or Provincial Manifest as appropriate

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Contact Enbridge Environment Staff in Edmonton.
Insulation (Non-Asbestos)
Waste Information Sheet

General Information

Original Use: Fireproofing and thermal insulation in buildings, pipes, and vessels.
Physical State: Batts of material or rolls.
Components: Fiberglass, calcium silicate, rockwool, foam material.

Potential Hazards

Class (WHMIS): D2A  MSDS: None.

Hazard Symbols: [Diagram]
Protective Equipment:

Environmental: Low hazard. Wildlife may ingest.
Health: May cause severe skin, eye and respiratory irritation. Insulation installation or removal will produce an irritating fibre dust.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Not hazardous if not contaminated with another dangerous good.

Storage: Contain in plastic bags or other sealable container at field facility.
Treatment / Disposal: Send / transfer to an approved landfill.

Comments:
- Repair exposed / damaged piping and building insulation.
- If possible, reuse insulation from demolition projects for new facility construction.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A
- TDG (includes loading / unloading): N/A

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Lubricants or other products in which the base is a soluble lead.
Physical State: Semi-solid
Components: Lead chloride, lead fluoborate.

Potential Hazards

Class (WHMIS): MSDS:
Hazard Symbols: Protective Equipment:

Environmental: Lead chloride and lead fluoborate are soluble and can therefore cause potential surface and groundwater contamination.
Health: Skin irritant. Toxic in certain concentrations.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Storage: If contaminated soil, a leachate test may be required.

Treatment / Disposal:
- Hazardous - Hazardous Waste Management Facility
- Non-hazardous - If leachate test okay, landfill which is licensed to accept this type of waste.

Comments:
Reportable Release Quantity:
- NWT: 5 kg or litres
- Alberta: 5 kg or litres
- Saskatchewan: 2 kg
- Manitoba: 5 kg or litres

Lead Compounds
Waste Information Sheet
September 2016
Lubricating Oil -
Hydrocarbon and Synthetic
Waste Information Sheet

General Information

Original Use: Lubrication of oilfield machinery, engines, compressors, and vehicles.
Physical State: Hydrocarbon liquids and grease.
Components: Chlorinated solvents, naphthalene, benzene, toluene, xylenes, lead, trace metals (i.e. Ba, Cr, V), triphenyl phosphate, butylated triphenyl phosphate, anti-rust and anti-oxidant additives.

Potential Hazards

Class (WHMIS): Not a controlled product.
Hazard Symbols: Protective Equipment:
Environmental: Potential groundwater and surface water contamination (hydrocarbons and metals) if applied to roads or other ground surfaces.
Health: Not an inhalation hazard if < 38°C. May cause some skin and tissue irritation.

Management Methods

Waste Classification:
- NWT: Non-Hazardous
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Non-Hazardous
- Ontario: Non-Hazardous (252-L)
- Québec: Residual Material

Note: Above waste classification applies to new and/or unused lubricating oils unless contaminated with heavy metals such as lead, barium or vanadium. Testing may be required.

Storage:
Store in sealed drums at field facility. Larger quantities should be stored in storage tanks equipped with spill containment measures. Used lubricating oil must be segregated from other produced / waste liquids.

Treatment / Disposal:
- Send to a lube oil recycling facility. Verify that recycler is licensed to receive and process lube oil.
- Return to supplier for recycling.

Comments:
Lube oil must be segregated from other waste fluids.
Various jurisdictions have specific management requirements for spent lube oil

Reportable Release Quantity:
- NWT: 100 litres
- Alberta: 5 kg or litres
- Saskatchewan: 100 litres (50 litres off-site)
- Manitoba: 100 litres
- Ontario: Any quantity
- Québec: Any quantity

Contact Enbridge Environment Staff in Edmonton.
## General Information

**Original Use:** Excess mercury from instrument manometers, mercury bulbs in tank level switches, mercoid switches.

**Physical State:** A low viscosity silvery liquid. Odorless. Synonyms: Quicksilver, Hydragyrum.

**Components:** Mercury.

## Potential Hazards

**Class (WHMIS):** D1A; D2A.

**MSDS:** Mercury.

**Hazard Symbols:** ![Hazard Symbols]

**Environmental:** Spilled mercury will contaminate pond and drainage ditch sludges and accumulate in drains / gutters within process buildings. Leachate may contain soluble mercury salts.

**Health:** Toxic vapors. Eye irritation. If absorbed by skin, may cause dermatitis. Long or repeated exposure may create emotional disorder and damage to the nervous system, kidneys or liver.

## Management Methods

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste (146-H)
- Québec: Residual Hazardous Material

**Storage:** Store in closed containers and in a cool, well ventilated place away from incompatible materials.

**Treatment / Disposal:** List on a chemical waste exchange program (if pure).

**Comments:** Send to a hazardous waste management facility.

**Reportable Release Quantity:**
- NWT: 5 kgs or litres
- Alberta: 5 kgs or litres
- Saskatchewan: 100 g
- Manitoba: 5 kgs or litres
- Ontario: Any quantity

**Metal Scrap**

**Waste Information Sheet**

**General Information**

**Original Use:** Refers to clean material (pipe, pumps, tanks etc.) which is not contaminated with insulation, asbestos, oil or sulphur. See also Waste Information Sheets on Construction and Demolition Material, Insulation (Asbestos) and Insulation (Non-asbestos).

**Physical State:** Solids.

**Components:** Metal (iron, steel, aluminum), traces of organic and inorganic lead, fluorides and other process chemicals.

**Potential Hazards**

**Class (WHMIS):** D1A; D2A

**MSDS:** None.

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:** Not considered a hazard. Possible ground or air contamination if not cleaned of hydrocarbon residue.

**Health:** Trace chemicals may cause skin and throat irritation. Particles may cause eye damage and irritation. Possible toxic fumes generated within enclosed vessels, units, spaces.

**Management Methods**

**Waste Classification:**
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

**Storage:** Store in a low traffic area of field facility. Keep storage area orderly and segregate metals by type for recycling.

**Treatment / Disposal:** Send to a scrap metal recycler. Ensure no liquid or oil residue prior to sending off site. Drain all liquids from equipment. Wipe liquid from surface where possible. All attempts to recycle must be made. Landfill is last resort.

**Comments:** Ensure waste is not contaminated with chemicals, oil, asbestos, etc.

**Reportable Release Quantity:**
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A

Methanol
Waste Information Sheet

General Information

Original Use: Methanol is used for drying pipelines (after hydrotesting) or for winter testing of pipelines to prevent from freezing. See Disposal Comments below for information on Hydrotest Water.

Physical State: Low viscosity clear colorless liquid, alcohol-like odour.

Components: Methanol – usually < 0.5%.

Potential Hazards

Class (WHMIS): B2, D1B, D2A, D2B. MSDS: Use MSDS of specific components (e.g.; Methanol, Methyl Hydrate).

Hazard Symbols: 🎯 Protective Equipment: 🧥-mask, 🧼-gloves

Environmental: Potential groundwater contamination if spilled. Very toxic to aquatic life. Health: Vapours may irritate nose, throat, lungs and cause eye irritation. Methanol is readily absorbed by the skin and may produce nervous system effects.

Management Methods

Storage: Store in steel drums or tanks in a well ventilated area away from heat sources.

Treatment / Disposal: Return to supplier for recycling/recovery. Hazardous – Hazardous Waste Management Facility

Comments: If large hydrostatic test requires methanol, consideration should be given to renting methanol water mixture from supplier and returning mixture to supplier when test is completed.

Reportable Release Quantity: NWT: 100 litres Alberta: 200 kg or litres Saskatchewan: 500 litres (100 off-site) Manitoba: 100 litres Ontario: Any quantity Québec: Any quantity TDG (includes loading / unloading): 200 kg or L

Methanol
Waste Information Sheet
September 2016
General Information

Original Use: Used in drilling operations to stabilize water sensitive formations, improve borehole stability, alleviate mud rings, reduce drill pipe torque and pumping pressure.

Physical State: May be oil based or gel chemical viscous liquid.

Components: Mixture of hydrocarbons and may contain corrosives.

Potential Hazards

Class (WHMIS): MSDS: Use MSDS of specific drilling mud type.

Hazard Symbols: Protective Equipment:

Environmental: Dependent on specific drilling mud type. May be toxic to aquatic species.
Health: High vapour concentrations may irritate eyes, skin and breathing, and may result in dizziness and headaches.

Management Methods

Waste Classification: NWT: Testing Required
Alberta: Testing Required
Saskatchewan: Testing Required
Manitoba: Testing Required
Ontario: Testing Required
Québec: Testing Required

Storage: Store in a corrosion resistant (plastic or lined) container at field facility. Keep closed. Store in a cool, well ventilated place away from potential sources of ignition or sparks and from high pH materials.

Treatment / Disposal: Recycle where possible

Comments: Approved Hazardous Waste Management Facility

Reportable Release Quantity: NWT: Dependent on mud type.
Alberta: Dependent on mud type.
Saskatchewan: Dependent on mud type.
Manitoba: Dependent on mud type.
Ontario: Dependent on mud type.
Québec: Dependent on mud type.

Placards: Dependent on specific drilling mud waste type.
Comments: Drilling mud may be water-based, oil-based, gel, or of other non-aqueous based types. Classification and shipping requirements dependent on specific drilling mud waste type. Testing required.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Maintenance and spill clean-up operations.
Physical State: Oily and dirty cloths.
Components: High concentrations of hydrocarbons, solvents and heavy metals, glycols.

Potential Hazards

Class (WHMIS): B4
MSDS: Use MSDS of specific components (e.g. Crude oil).
Hazard Symbols:

Environmental: Flammable - possible ignition of other landfill wastes. Potential groundwater contamination (from hydrocarbons) if disposed to landfill or directly on ground surface. Incineration without flue gas scrubber may produce toxic fumes.
Health: Skin irritation.

Protective Equipment:

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Québec: Residual Hazardous Material

NOTE: Above classification unless low flash point, BTEX component or hydrocarbon content.

Storage:
Store in drums or containers with loose-fitting lids at field facility (may be provided by cleaning service). Keep in a well ventilated area away from heat sources. Do not mix with other rags used for chemicals.

Treatment / Disposal:
- Send or scheduled pick-up to oily rag cleaning service.
- If rags cannot be recycled, deposit in waste filter bins for removal by waste contractor. May be landfilled with knowledge of waste contractor and landfill operator.

Comments:
In provinces where oily rags are considered to be non-hazardous, they can be recycled through a cleaning or drycleaning service. However the cleaning effluent may pose a worse environmental contamination. Question the cleaner’s operations on how its effluent is being disposed.

Reportable Release Quantity:
- NWT: 25 kg
- Alberta: 25 kg or litres
- Saskatchewan: 100 kg (50 kg off-site)
- Manitoba: 1 kg
- Ontario: Any quantity
- Québec: Any quantity

TDG Information

<tr>
<td>SOLIDS CONTAINING FLAMMABLE LIQUID N.O.S. (&quot;Technical Name&quot;)</td>
<td>4.1</td>
<td>UN 3175</td>
<td>II</td>
<td>16,56</td>
</tr>
</tbody>
</table>

Placards: Class 4.1 as appropriate (in bulk or over 500 kg).
Comments: If the rags are heavily oiled, they should be considered as a solid containing a flammable liquid. If dripping, they may be a FLAMMABLE LIQUID, N.O.S. Rags which are contaminated with other substances (e.g. chemicals) may also be TDG regulated. Depending on the level and type of contamination, oily rags may be considered spontaneously combustible, Class 4.2. Testing may be required.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e., manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Paints, Enamels & Stains
Waste Information Sheet

General Information

Original Use: Painting, etc.
Physical State: Liquids and dried paint, etc. in containers.
Components: Oil based paints, enamels, stain, shellac, varnishes and associated thinners are hazardous materials.

Potential Hazards

Class (WHMIS): Dependent on type of paint.
MSDS: Dependent on type of paint.

Hazard Symbols: 
Protective Equipment: 

Environmental: Surface water and groundwater contaminated. Vegetation damage. Fire hazard.
Health: High vapour concentrations may cause respiratory problems. Read container labels. Skin and eye irritants.

Management Methods

Waste Classification:
NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Ontario: Hazardous Waste (145-B)
Québec: Residual Hazardous Material

Storage:
Group common-based paints together. Keep in original containers. Liquid, grouped paints and associated materials should be stored in sealed lined drums or similar containers.

Treatment / Disposal:
Coordinate paint projects to reduce excess leftover supplies. Use all paint in containers. Non-hazardous paint materials should be recycled. Possible some off-site recycling of some oil and metallic based paints.

Comments:
See also "Containers - Paint, Stain, Enamel" Waste Information Sheet.

Reportable Release Quantity:
(if Class 3)
NWT: 100 litres
Alberta: 200 litres
Saskatchewan: 25 litres (5 litres off-site)
Ontario: Any quantity
Québec: Any quantity

Reportable Release Quantity:
(if Class 8)
NWT: 5 kg or litres
Alberta: 5 kg or litres
Saskatchewan: 50 kgs (50 kgs off-site)
Ontario: Any quantity
Québec: Any quantity

Contact Enbridge Environment Staff in Edmonton.
**General Information**

**Original Use:** Chemical solutions used to control unwanted plant growth on leases and right-of-ways.

**Physical State:** Poisonous liquid.

**Components:** Dependent upon type of pesticide.

**Potential Hazards**

**Class (WHMIS):** WHMIS testing required to verify. B4; D1B, D2A

**MSDS:** Specific to type of pesticide. See container or supplier’s information.

**Hazard Symbols:**

**Environmental:** Container effluent may cause severe environmental damage (surface and groundwater contamination, vegetation damage, and subsequent soil erosion).

**Health:** Various effects. Inhalation of some herbicides/pesticides can cause death. Herbicides/pesticides can be absorbed through the eyes and skin.

**Management Methods**

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

**Storage:** Collect in seal drums or leave in existing containers. Do not allow rain water to enter containers.

**Treatment / Disposal:** Apply herbicides/pesticide to target vegetation areas - but only for non-residual herbicides. Disposal only to a Hazardous Waste Management Facility.

**Comments:** Use certified contractors for herbicide/pesticide applications for all chemical vegetation control, and ensure they properly dispose of all containers and associated wastes to designated facilities.

**Reportable Release Quantity:**
- NWT: Any quantity (free liquids)
- Alberta: Any quantity (free liquids)
- Saskatchewan: Any quantity (free liquids)
- Manitoba: Any quantity (free liquids)
- Ontario: Any quantity (free liquids)
- Québec: Any quantity (free liquids)
- TDG (includes loading / unloading): Any quantity (free liquids)

**Placards:** Dependent on specific contaminant.

**Comments:** Classifications for this waste may vary depending on the specific contaminant. There are a large number of TDG categories for herbicides/pesticides. Consult the supplier and TDG Regulations for specific TDG classification. See also “Containers – Herbicides/Pesticides” Waste Information Sheet.

**Documentation**

**Transportation Documents:** TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Crude oil production, pipeline transmission, and heavy oil production. Generated from pipeline cleaning operations that have pig receiving facilities and from cleaning and emptying pipeline strainer baskets

Physical State: Liquid or wax.

Components: Hydrocarbon paraffin, demulsifiers.

Potential Hazards

Class (WHMIS): B2; B3; or B4

MSDS: Hydrocarbon related MSDSs.

Hazard Symbols: 🎲

Protective Equipment: 🩸 🩱

Environmental: Potential groundwater contamination if liquids are improperly contained in unlined ponds and pits. Hazardous air emissions if non-approved burn disposal. Potential groundwater and/or surface water contamination, vegetation damage if wax residuals applied to ground or roads.

Health: Not an inhalation hazard if < 38°C. High vapor concentration may irritate nose. Slight skin irritations.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Ontario: Hazardous Waste (251-I)
- Québec: Residual Hazardous Material

Storage: Contain in drums or other steel containers at field facility. Keep away from ignition and heat sources.

Treatment / Disposal:
- Send to a licensed oilfield reclaimer for product recovery.
- Recycle: Liquids - 100% of waste from crude oil pipelines may be recycled to crude oil slop tanks. Oil reclamation, with recycle to pipeline, followed by disposal of solids.
- Waxes - 100% of waste from crude oil pipelines may be recycled to refinery coo ker units, diluted with hot oils and mixed with crude stream.

Reportable Release Quantity:
- NWT: 100 litres
- Alberta: 200 litres
- Saskatchewan: 100 litres
- Ontario: Any quantity
- Québec: Any quantity
- TDG (includes loading / unloading): 200 litres

</tbody>
</table>

See TDG Comments below.

Placards:

Comments:
- If wax only with flash point >60°C, then not regulated if leachate test is OK.
- If ≤ 60°C, use FLAMMABLE LIQUIDS, N.O.S. (petroleum crude oil), Class 3, UN 1993, Packing Group II or III (establish packing group from flash point and boiling point tests).
- A representative wax sample should have tests performed to determine the possible leachates it may generate or its flammability. If wax test results meet TDG criteria, the wax could be classed as flammable or leachate toxic.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Pipe Coating (Coal Tar Wraps)
Waste Information Sheet

General Information

Original Use: Coating applied to underground pipes, pipe joints, fittings, couplings, etc. to protect the metal surfaces from corrosion.

Physical State: Pliable, coated fabric or other pliable material in a wound roll, resembling a roll of tape. May also be in the form of a viscous liquid or sludge.

Components: Various substances; may include epoxies, phenols, polyaromatic hydrocarbons, asbestos and/or PCBs.

Potential Hazards

Class (WHMIS): Dependent on specific coating type.

MSDS: Use MSDS of specific coal tar wrap type.

Hazard Symbols: "T"

Protective Equipment: "White glove"

Environmental: Coal tar is a known carcinogen to human and animal life.

Health: Various exposure limits dependent on the type of coal tar coating. May cause minor skin and eye irritation. Under fire conditions, may emit irritating/toxic fumes.

Management Methods

Waste Classification:
- NWT: Hazardous Waste
- Alberta: Dangerous Oilfield Waste
- Saskatchewan: Hazardous Waste
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste
- Québec: Residual Hazardous Material

Testing required. Dependent on specific waste chemical.

Storage: Store in a dry environment, away from continuous direct sunlight. Keep in original manufacturers packaging until ready to use.

Treatment / Disposal:
- Send to an appropriate waste management facility.
- Following appropriate disposal procedures if asbestos containing.

Comments: Avoid over supply.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

TDG Information

Shipping Name | Class | PIN | Packing Group | Special Provisions
--- | --- | --- | --- | ---
See TDG Comments Below | - | - | - | -

Placards: Dependent on specific waste chemical.

Comments: Dependent on specific waste chemical. If product was originally supplied as a dangerous good, then waste chemical is also a dangerous good. Use Shipping Name, Class, PIN, etc. of original shipment, unless original chemical properties have changed or contaminated with another dangerous good. If a mixture or solution of two or more dangerous goods, verify TDG Information with the Enbridge Environment Staff.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Produced Sand
Waste Information Sheet

General Information

Original Use: Produced from heavy oil operations and some reservoirs that allow sand fines into the wellbore. Includes the sand, oil and water mixture contained in the bottom of field separator tanks and ecology pits. Also mixtures produced desanding processes (hydrocyclones).

Physical State: Sand, water and hydrocarbon mixture.

Components: Chlorides, carbonates, oil, aromatics (BTEX), trace heavy metals, arsenic.

Potential Hazards

Class (WHMIS): B4; D2A

MSDS: Use MSDS of specific components.

Hazard Symbols: 

Protective Equipment: 

Environmental: The wastes high salt content may impact vegetation growth if a surface disposal method is used. Possible oil / phenol and salt migration into surface water and groundwater.

Health: Not an inhalation hazard if < 38°C. High vapor concentrations may irritate nose. Slight skin irritations.

Management Methods

Waste Classification:

NWT: Non-Hazardous Waste
Alberta: Non-Dangerous Oilfield Waste
Saskatchewan: Non-Hazardous Waste
Manitoba: Non-Hazardous Waste
Ontario: Verify with Ontario MOECC
Québec: Verify with Québec MDDELCC

Storage: Secure in impermeable tanks or ecology pits at field facility. Provide bird deterrent measures.

Treatment / Disposal:

• Waste may be road-spread (depending on hydrocarbon content).
• Send to a licensed oilfield reclaimer for hydrocarbon recovery (if sufficient hydrocarbon content).
• Send to a salt cavern disposal facility (Newalta Hughenden, AB).
• Send to cement plant.

Comments:

Reportable Release Quantity:

NWT: 25 kg
Alberta: 2 m³ (any amount off-site)
Saskatchewan: 1.6 m³ (any amount off-site)
Manitoba: 1 kg
Ontario: Any quantity
Québec: Any quantity

TDG (includes loading / unloading): 25 kg

TDG Information

Shipping Name: SOLIDS CONTAINING FLAMMABLE LIQUID, N.O.S. ("Technical Name")

Class: 4.1
PIN: UN 3175
Packing Group: II
Special Provisions: 16, 56

Placards: Class 4.1 or Class 3 (in bulk or over 500 kg)
Comments: If there is free liquid oil, use – Shipping Name PETROLEUM DISTILLATES, N.O.S., or PETROLEUM PRODUCTS, N.O.S., Class 3, UN 1268, Packing Group I, II, or III (establish packing group from flash point and boiling point tests).

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Produced Sand
Waste Information Sheet
September 2016
# General Information

**Original Use:** Human and waste water sewage generated at camp and office facilities.

**Synonyms:** Biological wastes, black water.

**Physical State:** Liquid to sludge.

**Components:** Biological wastes, chlorine, sodium, and heavy metals.

---

# Potential Hazards

<table>
<thead>
<tr>
<th>Class (WHMIS):</th>
<th>Not Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>MSDS:</td>
<td>Not Available</td>
</tr>
</tbody>
</table>

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:** Heavy metals can severely contaminate soils, surface water and groundwater. Generated gases can be flammable.

**Health:** Untreated sewage effluent can provide a medium for epidemic causing bacteria.

---

# Management Methods

**Waste Classification:**

- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

**Storage:** Contain in tanks or separate lined ponds.

**Treatment / Disposal:**

- Water conservation (usage and leak surveys). Effluent irrigation is viable but requires capital investment and engineering design (and applicable approvals/permits).
- Primary, secondary and tertiary treatment for water recovery, however larger capital investment required.
- Septic tanks and transport (if required) to local sewage treatment facility, if available, by commercial carrier. Sewage is usually regulated by the provincial public health act and/or clean water legislation.

**Reportable Release Quantity:**

Sludge - Hydrocarbon
Waste Information Sheet

General Information

Original Use: Oil production, transportation and storage operations. Waste sludge from the bottom of crude oil storage tanks, separators, inlet separators, slop tanks, flare knockouts, etc.
Components: Hydrocarbons, asphaltenes, corrosion inhibitors, iron oxides, iron sulphides, sand, silt.

Potential Hazards

Class (WHMIS): B4
MSDS: Use MSDS of specific components (e.g.; Crude oil, iron sulphide).

Hazard Symbols:
Protective Equipment:

Environmental: Waste characterization required to identify pollution concerns. Potential surface, groundwater, and soil contamination. Toxic leachate from possible high lead levels.
Health: Not an inhalation hazard if < 38°C. May cause skin, eye, and respiratory irritation.

Management Methods

Waste Classification:
NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Manitoba: Hazardous Waste
Ontario: Hazardous Waste (251-I)
Québec: Residual Hazardous Material

Storage:
• Large volumes may be temporarily stored in lined pits. For lesser volumes store in tanks or barrels.

Treatment / Disposal:
• Send to a licensed reclaimer for product recovery and disposal.
• Send to a waste contractor for potential treatment and disposal.
• Spread and treat waste on-site. Contact Enbridge Environment Staff.

Comments:
Reportable Release Quantity:
NWT: 100 litres (liquid); 25 kg (solid)
Alberta: 2 m³ (or any amount off-site)
Saskatchewan: 1.6 m³ (or any amount off-site)
Manitoba: 100 litres (liquid); 1 kg (solid)
Ontario: Any quantity
Québec: Any quantity

-
-

Placards:
Dependent on specific contaminant.
Comments: Classifications for this waste may vary depending on the specific contaminant. This waste is subject to a wide variability in its flammability, corrosiveness and specific chemical components. This waste has to be tested to determine if it meets any of the TDG classification criteria and, if required, a leachate test. Potential classes are 3, 4.1, 4.2.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
Spent Abrasives - Containing Paint Coating (Lead or Chromium)
Waste Information Sheet

General Information

Original Use: Paint coating on tanks and equipment.
Physical State: Solids
Components: Silica sand or metal shot containing abraded paint coating. Coating may contain lead or chromium. When used on pipes covered with coal tar and/or asbestos, refer to the corresponding WIS Pipe Coating (Coal Tar Wraps) and/or Asbestos.

Potential Hazards

Class (WHMIS): MSDS:
Hazard Symbols: Protective Equipment:

Environmental: May contaminate soil, surface water and groundwater.
Health: Breathing of particulate may cause respiratory complications. Skin and eye irritants.

Management Methods

Waste Classification:
- NWT: Testing Required
- Alberta: Testing Required
- Saskatchewan: Testing Required
- Manitoba: Testing Required
- Ontario: Testing Required
- Québec: Testing Required

Storage: Store abrasive in original container prior to use. Store spent abrasive in container or tank lot prior to disposal.
Treatment / Disposal: Hazardous Waste Management Facility - possible landfill that will receive hazardous wastes - confirm with waste contractor and landfill operator.
Comments: Spent abrasive should be analyzed for leachate (TCLP) content prior to disposal (lead, chromium, total hydrocarbon). Leachate criteria varies in different provinces. If required, consult Enbridge Environment Staff for appropriate leachate criteria.

Reportable Release Quantity:
- NWT: 5 kg or litres
- Alberta: 5 kg or litres
- Saskatchewan: 2 kg
- Manitoba: 5 kg or litres
- Ontario: Any quantity
- Québec: Any quantity

**General Information**

**Original Use:** Removes hydrogen sulfide from gases.

**Physical State:** Granular solid.

**Components:** Montmorillonite, water, iron oxides, silica

**Potential Hazards**

**Class (WHMIS):** D2A, D2B

**MSDS:** SULFATREAT 410 HP

**Hazard Symbols:**  

**Protective Equipment:**

**Environmental:** Non-toxic.

**Health:** Dust may cause eye, skin and respiratory tract irritation. Long term inhalation of particulates may cause lung damage.

**Management Methods**

**Waste Classification:**

- NWT: Non-Hazardous
- Alberta: Non-Hazardous/DOW
- Saskatchewan: Non-Hazardous
- Manitoba: Non-Hazardous
- Ontario: Non-Hazardous
- Québec: Residual Material

**Storage:** Keep away from heat, sparks and flame. Keep segregated from strong acids and strong oxidizers.

**Treatment / Disposal:** Recover and reclaim or recycle, where possible. Send/transfer to an approved landfill, unless believed to have changed properties and/or become contaminated with a dangerous good that would render it a hazardous waste.

**Comments:**

**Reportable Release Quantity:**

- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

**Company Records:** Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information? Contact Enbridge Environment Staff in Edmonton.
**Tank Seals**

Waste Information Sheet

### General Information

**Original Use:** Storage tank roof seals. “Foam logs” and fabric seals which are stained or soaked with crude oil.

**Synonyms:** Neoprene, rubber or canvas seals.

**Physical State:** Solids (metal, neoprene) contaminated with crude oil.

**Components:** Liquid hydrocarbons, asphalt, possible heavy metals. Waste should be analyzed.

### Potential Hazards

**Class (WHMIS):** B4  
**MSDS:** Crude Oil

**Hazard Symbols:**  

**Protective Equipment:**

**Environmental:** Potential for soil and groundwater contamination if improperly stored or landfilled.

**Health:** High vapour concentrations may irritate inhalation. Slight skin irritations.

### Management Methods

**Waste Classification:**
- NWT: Hazardous Waste
- Alberta: Hazardous Waste/DOW
- Saskatchewan: Waste Dangerous Good
- Manitoba: Hazardous Waste
- Ontario: Hazardous Waste (251-I)
- Québec: Residual Hazardous Material

**Note:** Above classification if significant hydrocarbon content.

**Storage:** Temporary storage on-site; if potential exists for liquid contaminants (oil) then store in lined area, tanks or barrels. Prevent additional soil contamination by protecting from rain and snow melt.

**Treatment / Disposal:**
- Pretreatment: Seals and steel must be cleaned by scraping, wiping, draining, or steam cleaning.
- Hazardous – Hazardous Waste Management Facility
- Non-hazardous – Landfill: contact landfill operator for specific instructions before shipment.

**Comments:**
- See also Waste Information Sheets on Metal - Scrap and Water - Oily. Reduce quantity of oily water that results from steam cleaning by storing steel until sufficient quantities (storage restrictions may apply). Ensure that metal recyclers only take “cleaned” metal. Seals may require sampling prior to disposal. Contact Enbridge Environment Staff for assistance.

**Reportable Release Quantity:**
- NWT: 25 kg
- Alberta: 25 kg or litres
- Saskatchewan: 100 kg (50 kg off-site)
- Manitoba: 1 kg
- Ontario: Any quantity
- Québec: Any quantity

Contact Enbridge Environment Staff in Edmonton.
**General Information**

**Original Use:**
- Tape: Pipeline water-proofing and protection against corrosion.
- Paste: Priming metal prior to the application of anti-corrosion (Denso) tape.

**Synonyms:** Denso Paste.

**Physical State:**
- Brown paste or brown paste impregnated tape.

**Components:**
- Tape: Hydrocarbon wax (petrolatum), china clay and polyester fibre fabric.
- Paste: China clay and petrolatum (petroleum jelly).

**Potential Hazards**

**Class (WHMIS):** Not a controlled product.

**MSDS:** Denso paste and Denso tape.

**Hazard Symbols:**

**Protective Equipment:**

**Environmental:**
- Combustion will produce carbon monoxide and carbon dioxide.

**Health:**
- Prolonged and repeated contact may irritate skin.

**Management Methods**

**Waste Classification:**
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

**Storage:**
- Store in original supplier packaging/containers. Store in cool conditions. Avoid heat and flame.

**Treatment / Disposal:**
- Non-hazardous: Landfill - for large waste quantities contact landfill operator in advance.

**Reportable Release Quantity:**
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

Tires
Waste Information Sheet

General Information

Original Use: Automobile and truck tires. Used tires for pipe supports in pipeline construction. Synonyms: Rubber.
Physical State: Solid
Components: Rubber, Steel belt, additives.

Potential Hazards

Class (WHMIS): Not a controlled product.
MSDS: Not applicable.
Hazard Symbols: 
Protective Equipment: 

Environmental: Non-biodegradable or crushable.
Health: No hazards.

Management Methods

Waste Classification:
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

Storage: Store in neat short stacks with space between rows - not in a haphazard pile. Do not store for extensive time periods. Avoid rainwater collection.

Treatment / Disposal: Most provinces have a tire recycling program in place. Perform vehicle maintenance at service stations with a tire recycling program in place.

Comments: Ensure that tires are segregated at landfill. Possible spontaneous combustion in landfills due to air cavities - non-biodegradable or crushable.

Reportable Release Quantity:
- NWT: N/A
- Alberta: N/A
- Saskatchewan: N/A
- Manitoba: N/A
- Ontario: N/A
- Québec: N/A

Wash Fluids - Solvents
Waste Information Sheet

General Information

Original Use: Waste includes solvents from equipment cleaning operations.
Components: Tetra and trichloroethylene, xylene, acetone, ethyl acetate, methyl isobutyl ketone, n-butyl alcohol, cyclohexane, methanol, cresols, cresylic acid, toluene, carbon disulphide, isobutane, pyridine, ammonia based substances and hydrocarbon bases (kerosene).

Potential Hazards

Class (WHMIS): D2A, B2
 MSDS: Use MSDS of specific wash components.
Hazard Symbols: 
Protective Equipment: 
Environmental: A highly mobile waste stream. Potential for groundwater and soil contamination. Possible toxic vapors and fire hazard with on-site recycling operations.
Health: May cause skin, eye and respiratory irritation. Most solvents are toxic.

Management Methods

Waste Classification:
NWT: Hazardous Waste
Alberta: Hazardous Waste/DOW
Saskatchewan: Waste Dangerous Good
Manitoba: Hazardous Waste
Ontario: Hazardous Waste
Québec: Residual Hazardous Material

Storage: Store in closed tanks or sealed drums at field facility. Keep containers closed and away from sources of heat and ignition. Store unused fluids in original containers inside of sealed drums with sorbents.

Treatment / Disposal:
• Hydrocarbon / solvent / crude oil mixtures may be recycled.
• Send to a licensed solvent recycler.
• Send to a Hazardous Waste Management Facility

Comments:
• Use non-hydrocarbon based wash fluids when possible. Do not use chlorinated hydrocarbons (e.g. methylene) as cleaning solvents.
• Halogenated organic solvents must be segregated from all other waste streams.

Reportable Release Quantity:
NWT: 100 litres
Alberta: 200 litres
Saskatchewan: 25 litres (5 litres off-site)
Manitoba: 100 litres
Ontario: Any quantity
Québec: Any quantity

TDG Information

Shipping Name | Class | PIN | Packing Group | Special Provisions
---|---|---|---|---
See TDG Comments below. | - | - | - | -

Placards: Class 3, 6, 8 or 9 as appropriate (in bulk or over 500 kg.).
Comments: Solvents can be classified as Flammable Liquids (Class 3), Poisonous (Class 6), and Corrosive (Class 8). Refer to supplier information for TDG classification.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Waste includes water used for equipment, buildings and process area water / steam cleaning and maintenance, drains, and runoff water.
Physical State: Liquid.
Components: Water, iron oxides, calcium carbonate, sand / silt, trace hydrocarbons, crude oil, lube oil, salts, metals (lead, chromium, thallium).

Potential Hazards

Class (WHMIS): D2A
MSDS: Use MSDS of specific wash components.

Hazard Symbols: 

Protective Equipment: 

Environmental: Potential groundwater contamination (from hydrocarbon and metal leaching) if improperly stored in an unlined pond. Potential surface water and soil contamination.
Health: Not an inhalation hazard if < 38°C. High vapor concentrate may irritate nose and throat. Slight skin irritations.

Management Methods

Waste Classification: NWT: Testing Required
Alberta: Testing Required
Saskatchewan: Testing Required
Manitoba: Testing Required
Ontario: Testing Required
Québec: Testing Required

Storage: Process wash waters are usually handled in a closed system (sumps). For open systems contain in drums or, if necessary, in lined ponds (if no possibility of mixing with other water).

Treatment / Disposal:
• Dispose to slop system.
• If significant quantities, send to third party disposal well.
• Contact Enbridge Environment Staff for assistance

Comments: Recover hydrocarbons before disposal. Minimize the generation of mists or vapours.
Waste waters with more than 3% oils may allow for the recovery of hydrocarbons at approved reclaimers or via on-site separation equipment.

Reportable Release Quantity: NWT: 5 kgs or litres
Alberta: 5 kgs or litres
Saskatchewan: 5 kgs or litres
Manitoba: 5 kgs or litres
Ontario: Any quantity
Québec: Any quantity
TDG (includes loading / unloading): 5 kgs or litres

TDG Information

</thead>
<tbody>
<tr>
<td>See TDG Comments Below</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

Placards: Dependent on specific contaminant.
Comments: Classifications for this waste may vary depending on the specific contaminant and is dependent on the nature of cleaners and surfaces cleaned. If waste is commingled with other produced waters then use the classification for produced water. If separated (not commingled), the TDG classification is dependent on the nature of the cleaners used and other contaminants (hydrocarbons).

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.
Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
General Information

Original Use: Wash waters, cooling waters, buildings, drains, steam cleaning operations and may include run-off water. Collected in sumps. Synonyms: Waste water, waste water pond water, run-off holding pond water, roof run-off water, steam cleaning water.

Physical State: Liquid

Components: Water, iron oxides, calcium carbonate, sand/silt, oil and grease, trace metals (lead, chromium, thallium), BTEX.

Potential Hazards

Class (WHMIS): B4

MSDS: Crude Oil.

Hazard Symbols: 

Protective Equipment: 

Environmental: Waste may contain polycyclic aromatic hydrocarbons and volatile which will generate toxic fumes during decomposition of the waste. May also contain trace metals and sulfides. Potential groundwater contamination (metals, hydrocarbons) if stored in an unlined pond

Health: Not an inhalation hazard below 38°C. High vapour concentrate may irritate nose. Slight skin irritations.

Management Methods

Waste Classification:

NWT: Non-Hazardous Waste
Alberta: Non-Hazardous Waste/Non-DOW
Saskatchewan: Non-Hazardous Waste
Manitoba: Non-Hazardous Waste
Ontario: Non-Hazardous Waste (251-L)
Québec: Residual Material

NOTE: Above classification unless low flash point, BTEX or hydrocarbon content.

Storage:
Oil water should usually be handled in a closed system. Store in tanks. If necessary, impervious earthen/lined ponds if there is no possibility of mixing with other waters.

Treatment / Disposal:
- Waste waters containing more than 3% oils may allow for the recovery of hydrocarbons at approved reclaimers.
- Deep Well Disposal. Possible watershed release after treatment and approval from government environment department. Contact Enbridge Environment Staff for assistance.

Comments:
The construction and operation of any facilities designed for the treatment of waste waters will require approval by the provincial environmental agency.

Reportable Release Quantity:

NWT: 100 litres
Alberta: 200 litres
Saskatchewan: Any quantity
Manitoba: 100 litres
Ontario: Any quantity
Québec: Any quantity

TDG Information

Shipping Name: See TDG Comments Below

Class: -
PIN: -
Packing Group: -
Special Provisions: -

Placards: Dependent on specific contaminant.

Comments: Generally not TDG regulated. However, the TDG classification is dependent on the hydrocarbon content (flammable) and leachate test. If hydrocarbon contents are high the waste may be Classed as; FLAMMABLE LIQUIDS, N.O.S. ("Technical Name"), Class 3, UN 1993.

Documentation

Transportation Documents: TDG Shipping Document or provincial Manifest / Movement Document, as appropriate.

Company Records: Maintain a copy of all waste information (i.e. manifests, shipping documents, disposal agreements) at the ENBRIDGE Field or Region office.

Need further information?
Contact Enbridge Environment Staff in Edmonton.
## General Information

**Original Use:** Includes all water separated from hydrocarbon streams during all phases of oil and gas production and transportation.

**Physical State:** Liquid. Synonyms - salt water, tank drawdown water.

**Components:** Chlorides, benzene, toluene, ethylbenzene, naphthalene, phenols, water, dissolved solids and organic carbon.

## Potential Hazards

**Class (WHMIS):** B2, B3, D1B, D2A

**Hazard Symbols:**

**Environmental:** Potential groundwater contamination. Potential surface water and soil contamination (salt) from spillage. Possible contamination of disposal formation (if deep well disposed). Extremely persistent compound which is toxic to the environment in high concentrations.

**Health:** Not hazard below 38°C. High vapor concentrate may irritate nose. Slight skin irritations.

## Management Methods

**Waste Classification:**
- NWT: Non-Hazardous Waste
- Alberta: Non-Hazardous Waste/Non-DOW
- Saskatchewan: Non-Hazardous Waste
- Manitoba: Non-Hazardous Waste
- Ontario: Non-Hazardous Waste
- Québec: Residual Material

**Storage:** Minimize the generation of mists or vapors. Store in tanks.

**Treatment / Disposal:** Produced formation waters should be segregated from all other waste waters. Should only be handled in a closed system. Deep well disposal.

**Comments:** Drainage onto tank lots can increase lease restoration costs.

**Reportable Release Quantity:**
- NWT: 100 litres
- Alberta: 200 litres
- Saskatchewan: Any quantity
- Manitoba: 100 litres
- Ontario: Any quantity
- Québec: Any quantity
- TDG (includes loading / unloading): 200 litres
