Subject: RE: Behchoko Cell 2 proposed plan

Harvey,

Here is the update for April 27th.

Discharging of Cell 2 continues, at this point effluent level is below decant valve.

Community Government is working with the Tlichio Investment Corp to prepare a plan find the breach in Cell 2

The proposed plan including:

Damming off Cell 2 before and after the decant structure with maga bags of sand.

Pump out remaining effluent and input clean water with dye to track the flow under the decant structure to determine the location of the breach.

Plan will be submitted ASAP and they want to start work immediately after.

Subject: Behchoko Cell 2 proposed plan

I spoke with Galvin and he advised that the community government is working with the Tlichio Investment Corporation Engineers, Chris and Ron, and they have been in meetings this morning and over lunch and are looking to:

dam off cell 2 before the decant structure and after it as well with sand, perhaps in mega-bags, since they don't have a hazardous waste site at the landfill they are asking if it would be acceptable to deposit these bags, after the work is completed, in the desludging cell 3 in the Edzo lagoon.

They are thinking that they will pump out remaining effluent and then input clean water with dye in it to track the flow under the decant structure.

A plan is currently being drafted and will be submitted ASAP.

They want to start the work next week or ASAP.

I advised that I did not think that the work within the lagoon would trigger any need for a special permit as this would fall under maintenance but that I would check the O&M plan. Consideration of the request for the deposit of the bags and/or material if not in cell 3 of the Edzo lagoon then where?

Heather Beck
