Thanks for sending this over Rick.

Quite likely the SNP might need a few tweaks as our attention was certainly more focused on the rest of the WL. The Board made a statement to the affect that it intends to amend the SNP shortly after hearing from the Minister at the end of October as there were a few additional items that were flagged late in the renewal proceeding ☺ CC'ing Sarah and Jessica so they're in the loop.

Cheers,

**Ryan Fequet, BSc.**

**Importance:** High

Hi Ryan,

I got your phone message so I figured it was easier to write an email. I'm not sure if they are discrepancies or not but I was having some trouble referencing things so I have jotted them down below so you can check. I'm not sure if maybe some numbering changed between versions or something but you can look and see what you think.

- Page 8 of 37 of Annex 1: SNP (page 58 of the pdf I have) – Regarding acutely lethal toxicity testing there is reference to Part H, Item 7(a) and (b) and a link to footnote but Part H, Item 7 in the body is the Waste Rock Management Plan. I think it should be Part H, Item 30 which has the information on the testing requirements for the rainbow trout and *Daphnia*.
- In the same footnote there is reference to *Hyalella azteca* testing related to Part H, Item 8. H, 8 is also related to Waste Rock Management Plan. I'm not exactly sure which condition that is actually referencing. The following page there is again reference to the *Hyalella* test and H, Item 9. Reading the RFD it looks like the *Hyalella* testing may have been removed so it might just be a remnant of the old WL.

I was looking up some toxicity testing information so I flagged those couple, I didn't look at anything else in that much detail. It looks like the SNP reference for the acute testing might need to be updated to reflect that the condition has been renumbered in the body of the WL and the *Hyallela* reference in the SNP may need to be removed?

Rick
